● **Low noise:** To reduce the aerodynamic noise of fan and minimize the whirlpool loss in the tip of blade and blade root.

● **Wide application:** DTF(R)-(H/S/V) vane axial fan is equipped with high protection glasses, high insula-tion degree, hot and humid type and high temperature resistant motor. So the fan is used for ventilation (exhaust) air in the ventilation system of metro, tunnel, electric power, large dam and construction engi-neering, as well as in the fire smoke discharge system or not fire smoke system under the emergency conditions.

● **Good strength:** Blades are cast in aluminum alloy. There is good radial structure for the aluminum alloy blades and hub. The thermal expansion factor of the fan impeller and casing detected by X laser is considered under the temperature of 300℃ to ensure the strength of impeller and high speed operation.

● **Compact structure:** To make the fan as compact as possible, the static blade of the fan and guide vane device is designed to minimize the length of the fan casing. The casing and support are made the finite element calculation to ensure the specific conditions in the metro and electric power station.

● **Anti-surge:** The fan is equipped with the anti_surge system, which prevent the surge caused by the possible over_speed operation of the fan under the non_design work conditions or only one fan is oper-ating when the fan group is parallel connection. So the surge alarm is not necessary.

● **Good corrosion resistant:** Fan casing is hot dip galvanized. Motor is hot and humid type. Fan blades and hub is made of aluminum alloy.

● **Stable operation:** Fan impeller is balanced, bal ance precision up to ISO-2.8 (higher than national class 5.6). Over_speed test of the impeller, complete vibration test and aerodynamic perfomance test to reach the requirements of high speed stable operation prior to the factory.
