AMCA CERTIFIED RATINGS
L&D certifies that the model IL-31 louver shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA Certified Ratings Seal applies to air performance ratings and water penetration ratings.

See Reverse Side For Performance Data
Below is an explanation of how to use the AMCA performance data for the recommended free area velocity of 1250 (6.35 m/s).

To determine minimum free area required for louver:

Step #1: Divide the required CFM flow by the maximum recommended free area velocity.

Step #2: Select the most desirable louver size, from the free area table, that meets the minimum free area requirement.

Step #3: Compare specified performance to the certified water penetration and pressure drop ratings.

Example: Given 15,000 CFM design flow

\[
\text{min. free area} = \frac{\text{Design CFM}}{\text{Max. Recommended Velocity}} = \frac{15,000}{12.0 \text{ sq. ft.}} = \frac{1500}{1250} = 1.2 \text{ sq. ft.}
\]

Step #2: From the free area table above the approximate louver size is 48" x 60" = (12.0 sq. ft.)
