Model FSD-312M
Combination Fire Smoke Dampers
Steel Airfoil Blades
UL 555S Leakage Class II
UL 555 1 1/2 Hour Fire Resistance Rating

Width and Height dimensions furnished approximately 1/4 in. (6mm) undersize. Add sleeve thickness for overall sleeved damper dimension. Right hand drive is shown. Left hand drive is available upon request.

Model FSD-312M meets the requirements for fire dampers, smoke dampers and combination fire smoke dampers established by:
National Fire Protection Association
NFPA Standards 80, 90A, 92, 101, & 105
IBC International Building Codes
CSFM California State Fire Marshal
Fire Damper Listing (#3225-0981:103)
Leakage (Smoke) Damper Listing (#3230-0981:104)

See complete marking on product.
UL 555 and UL 555S
Classification R13317

Features
- Frames are constructed with reinforced corners. Low profile head and sill are used on sizes less than 17 in. high (432mm)
- Blades are a double skin airfoil with full length structural reinforcement

*Note: Maximum sizes are dependent on velocities and pressure.
Pressure Drop Data

This pressure drop testing was conducted in accordance with AMCA Standard 500-D using the three configurations shown. All data has been corrected to represent standard air at a density of 0.075 lb/ft$^3$ (1.201 kg/m$^3$).

Actual pressure drop found in any HVAC system is a combination of many factors. This pressure drop information along with an analysis of other system influences should be used to estimate actual pressure losses for a damper installed in a given HVAC system.

**AMCA Test Figures**

**Figure 5.3** Illustrates a fully ducted damper. This configuration has the lowest pressure drop of the three test configurations because entrance and exit losses are minimized by straight duct runs upstream and downstream of the damper.

**Figure 5.2** Illustrates a ducted damper exhausting air into an open area. This configuration has a lower pressure drop than Figure 5.5 because entrance losses are minimized by a straight duct run upstream of the damper.

**Figure 5.5** Illustrates a plenum mounted damper. This configuration has the highest pressure drop because of extremely high entrance and exit losses due to the sudden changes of area in the system.
Greenheck Fan Corporation certifies that the model FSD-312M shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Programs. The AMCA Certified Ratings Seal applies to air performance ratings only.
**Damper Sleeve Dimensional Data**

The drawing (to the right) and corresponding table show the position of the FSD-312M damper when mounted in a factory sleeve. The standard mounting locations provide enough space for the mounting of actuators, controls, and allow space for installation of retaining angles and duct connections.

The standard location of a damper mounted in a factory sleeve ("A" dimension) is shown below. The damper can be positioned at other locations within a range of 6 in. (152mm) to 16 in. (406mm) for the “A” dimension.

**Actuators and Accessories Space Envelopes**

Externally mounted actuators require space outside of the damper sleeve. The “S” dimension illustrates the clearance required for various available actuators.

On dampers less than 18 in. (457mm) high, actuators may also require clearances above and/or below the sleeve. “B” and “T” dimensions are worst case clearance requirements for some dampers less than 18 in. (457mm) high. All dampers 18 in. (457mm) or more in height, do not require these worst case clearances. If space availability above or below the damper sleeve is limited, each damper size should be individually evaluated.

* For dampers 18 in. (457mm) or more in height these dimensions are 0 in.
Dampers larger than maximum single section size are supplied as a factory assembly of two or more sections of equal size. The following figures show maximum damper section size and assembly configurations for multi-section dampers.

**Transitioned Damper Dimensions**

When a combination fire smoke damper is being used in conjunction with round or oval ductwork, the FSD-312M can be supplied in a factory sleeve with round or oval transitions on both ends of the sleeve. Dampers should be ordered to the duct dimensions. Drawings below show overall damper size.

*These dimensions are furnished approximately ¼ in. (6mm) undersize, except round and oval dimensions which are approximately ⅛ in. (3mm) undersize.

Ts = (2)(Sleeve Thickness)
Combination Fire Smoke Dampers meeting the following specifications shall be furnished and installed where shown on plans and/or as described in schedules. Dampers shall meet the requirements of NFPA 80, 90A, 92, 101, and 105 and further shall be tested, rated and labeled in accordance with the latest edition of UL Standards 555 and 555S. Dampers shall have a UL555 fire rating of 1½ hours and be of low leakage design qualified to UL 555S Leakage Class II.

Each damper/actuator combination shall have a UL 555S elevated temperature rating of 250°F (121°C) minimum and shall be operational and dynamic rated to operate at maximum design airflow at its installed location. Each damper shall be supplied with an appropriate actuator installed by the damper manufacturer at the time of damper fabrication. Damper actuator shall be electric type for 24 volt operation.

Damper blades shall be of the double skin airfoil type and shall have an equivalent thickness of 14 ga. (2mm).

Damper frame shall be galvanized steel formed into a structural hat channel shape with reinforced corners. Bearings shall be 316SS sleeve type rotating in extruded holes in the damper frame. Blade edge seals shall be silicone rubber designed to inflate and provide a tighter seal against leakage as pressure on either side of the damper increases. Jamb seals shall be stainless steel compression type. Blades shall be symmetrical relative to their axle pivot point, presenting identical resistance to airflow in either direction or pressure on either side of the damper.

Damper must be rated for mounting vertically (with blades running horizontal) or horizontally and be UL 555S rated for leakage and airflow in either direction through the damper. Each damper shall be supplied with a 165°F (74°C) RRL. Testing and ratings to be in accordance with AMCA standard 500-D.

The basis of design is Greenheck Model FSD-312M.
