INTRODUCTION

IndustraCon Industrial Exhaust

The IndustraCon is a high quality fan for use in all types of industrial applications where you have high static pressures, such as paper mills, dust collectors, power plants, and woodworking plants.

The PennBarry Series 61 IndustraCon line of fans is the result of over 30 years of experience in designing and engineering high quality fans. The performance ratings shown are based on tests to AMCA Standard 210.

Trained PennBarry sales representatives are available to offer assistance in the proper selection and application of IndustraCon fans or other equipment in the complete line of PennBarry products.

IndustraCon

Model: IND

- Volumes up to 105,600 CFM.
- Available arrangements are 1, 4, 9, and 10.
- Inlet sizes up to 41" in diameter.
- Wheels up to 71 1/4".
- Static pressures up to 30" WG.

CERTIFICATIONS & LISTINGS

AMCA Certification

PennBarry certifies that the IND, Series 61 fans shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

PERFORMANCE LIMITS

Three basic types of wheels are offered in the PennBarry line of industrial fans. The OT wheel design is offered in OT-15, OT-17, OT-20 and OT-15H (heavy-duty) wheels. The WT wheel design is offered in three variations: the WT-15, WT-17 and WT-15H (heavy duty) wheels. The AH or "air handling" type wheel is offered in two versions, the AH-15 and the AH-17. The designations 15, 17 and 20 denote the pressure and outlet velocity capabilities of the wheels; the higher numbers denote higher capabilities.

The designations "15," "17," and "20" shown on the fan performance tables are governed not only by the maximum allowable speed, but also by the horsepower transmitted to the shaft. Therefore, the RPM's shown in the table above may be lower than shown.

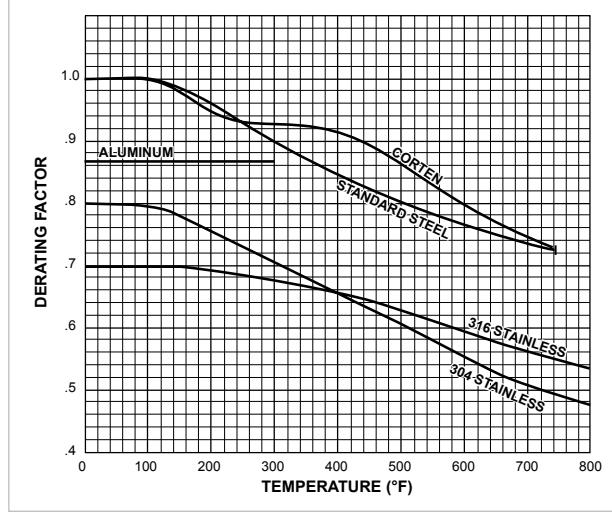

*Multiply the maximum fan speed given above by the derating factor in the following charts to arrive at the maximum allowable fan speed at elevated temperatures.

RPM REDUCTION FACTORS FOR HIGH TEMPERATURE OPERATION

Type OT and WT Wheels

Type AH Wheels

PROCEDURE FOR USING DENSITY FACTORS

The fan performance tables that are contained in this catalog are based on standard air as defined by AMCA; this condition is 70°F and dry air at sea level pressure (29.92" of mercury). This results is an air density of 0.075 lb. per cu. ft. of air.

A convenient method of converting actual conditions of air back to standard air conditions is by utilizing the following table where air density ratios may be determined by knowing the actual air temperature and the altitude at which the fan is operating.

By dividing the actual static pressure (hot static pressure) by the density ratio, the standard or cold (70°F) static pressure is established. Once the equivalent standard conditions have been established, the following fan performance tables may be utilized, and the exact speed of the fan may be determined. The indicated brake horsepower at standard conditions, however, must be multiplied by the density factor to determine the hot or actual operating BHP.

It naturally follows that, the less dense the air, the less the air will weigh per given volume and, consequently, the fan will require less energy to move a given volume of air. Bear in mind, however, that during the start-up time, especially in process applications, the air may be cold and the fan might consequently require more cold HP from the motor than it will at hot actual operating conditions.

Also, keep in mind that at elevated temperatures most metals become weaker and lubricants can break down. We, therefore, suggest you refer to the tables on page 5 to determine the actual limitation of the fan at varying inlet temperatures. It may be necessary to employ additional features such as stainless steel wheel construction, cooling wheels and seals, and modified bearings to cope with the elevated temperatures.

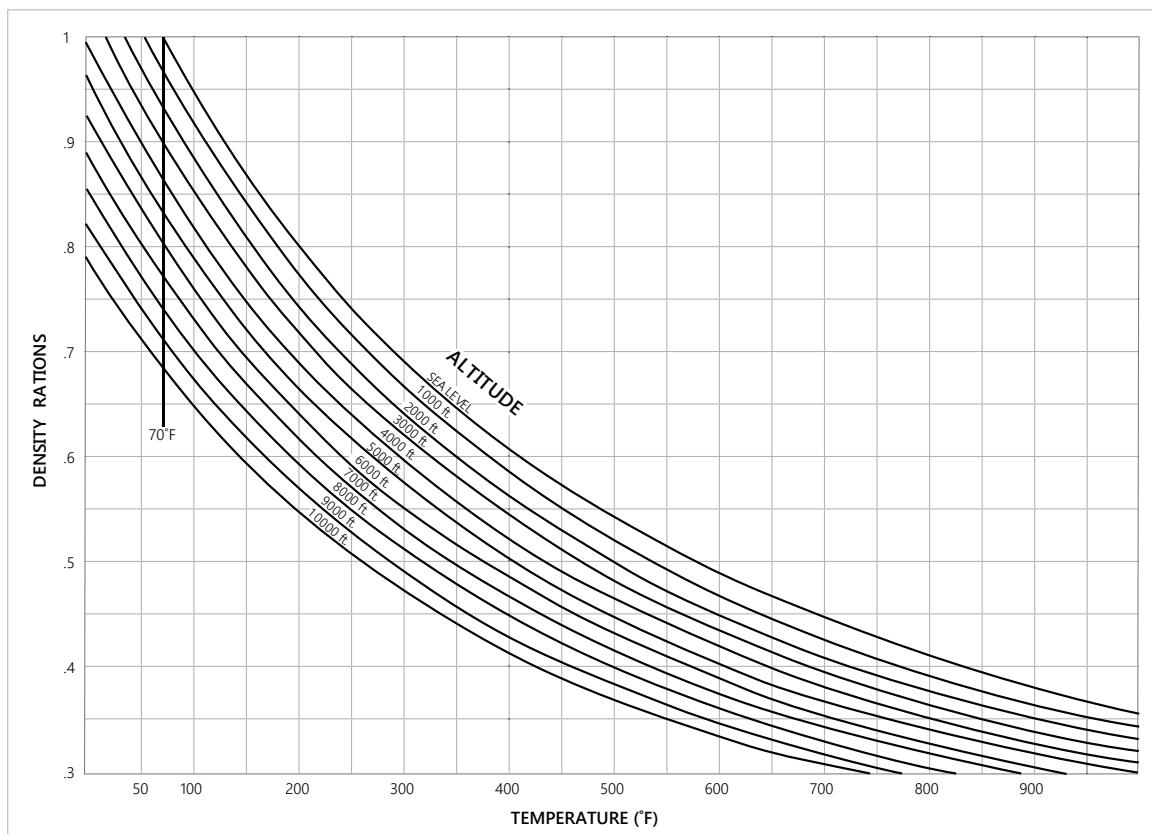

Let us now look at the following example where the density of the air is different from that of standard.

Example:

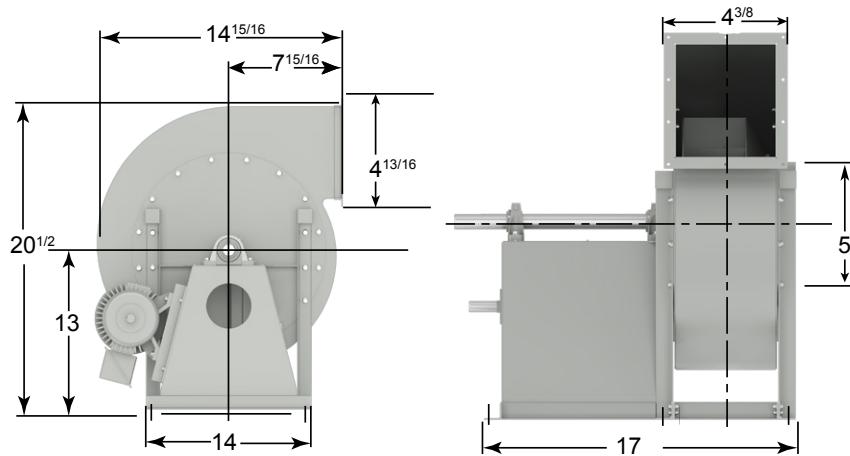

Conditions — 10,000 CFM of 400°F air at an altitude of 5,000 feet. A static pressure of 10" w.g. Open type wheel.

To correct to standard air density, refer to the chart below and determine the air density ratio of .51. Divide the 10" SP by the density ratio of .51 to arrive at a new static pressure of 19.63. Refer to the table on page 19-20 to determine that the 21-61 must operate at 1613 RPM. The cold brake horsepower is 48.40. The actual brake horsepower becomes $48.40 \times .51$ or 24.68 brake horsepower.

Air Density Ratios at Various Altitudes and Air Temperatures

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

Performance certified is for Installation Type D: ducted inlet, ducted outlet. Performance ratings do not include the effects of appurtenances. Power rating (BHP) does not include transmission losses. Bold data shows fans maximum static efficiency.

PENNBARRY PRODUCT SOLUTIONS

Commercial

- Roof & wall exhaust centrifugal fans
- Ceiling, wall, & inline centrifugal fans
- Roof supply centrifugal fans
- Square & round centrifugal fans
- Wall mounted axial fans
- Hooded roof axial fans
- Upblast roof axial fans
- Gravity ventilators
- Roof curbs

Industrial

- Freestanding centrifugal fans
- Industrial & material handling fans
- Tubular centrifugal inline fans
- Mixed flow centrifugal fans
- Plug & plenum fans
- Wall mounted propeller fans
- Tube axial fans
- Vane axial fans
- Bifurcator fans
- Lab exhaust

Kitchen ventilation

- Make-up air units
- Exhaust fans

Energy recovery

- Outdoor units
- Indoor units

PennBarry is proud to be your preferred manufacturer of commercial and industrial fans and blowers. Learn how PennBarry can assist you in your next application by contacting your PennBarry Representative or visiting us on the web at www.pennbarry.com
