

# **Application**

The EAA-845 airfoil blade acoustical louver provides low static pressure loss and reliable noise reduction over a wide range of frequencies. The EAA-845 is available in a wide array of finishes including custom color matching and is ideally suited for intake or exhaust application on standby generator enclosures.

### Standard Construction

Material: Mill finish 6063-T5 extruded aluminum.

Frame: 8" deep  $\times$  0.081" thick (203  $\times$  2) channel.

Blades: 45° × 0.081" (2) thick airfoil style with a 20ga. (0.8) thick perforated backing packed with noncombustible insulating material.

Screen: 1/2"  $\times$  0.063" (12.7  $\times$  1.6) expanded and flattened

aluminum.

Mullion: Visible

**Minimum Size:** 12" × 18" (305 × 457)

Maximum Size: Single section: 60" x 120" (1524 x 3048)

Multiple section: Unlimited

## **Options**

☐ Factory finish:

☐ High Performance Fluoropolymer - 100% resin Newlar®/

70% resin Kynar®

☐ Baked Enamel/Polvester

☐ Clear or Color Anodized, Class 1

☐ Prime Coat

☐ Flange frame:

☐ 11/2" (38) flange frame

☐ Custom-size flange

☐ Stucco flange

☐ Glazing frame

☐ 11/2" (38) flange frame.

□ Welded construction.

☐ Alternate bird or insect screens.

☐ Insulated or non-insulated blank-off panels.

☐ Filter racks.

☐ Hinged frame.

☐ Head and/or sill flashing.

☐ Installation hardware:

☐ Clip angles ☐ Continuous angles

☐ Burglar bars:

☐ Shipped loose ☐ Shipped mounted

☐ Frame closure.

# WATER

#### **Certified Ratings:**

All-Lite certifies that the model EAA-845 shown herein is licensed to bear the AMCA seal. The ratings shown are based on test and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA Certified Ratings seal applies to water penetration and air performance.

Free Area:  $[48" \times 48" (1219 \times 1219) \text{ unit}]: 6.1 \text{ ft}^2 (0.56 \text{ m}^2)$ 

Performance @ Beginning Point of Water Penetration Free Area Velocity: 649 fpm (3.30 m/s)

Certified Ratings: All-Lite certifies that the model EAA-845 shown herein is licensed to bear the AMCA seal. The ratings shown are based on test and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA Program. The AMCA Certified Ratings seal applies to water penetration and air performance.

## **Pressure Loss**

(Data corrected to standard air density)

Louver Test Size = 48" x 48" (1219 x 1219)

Pressure loss tested in accordance with Figure 5.5 of AMCA Standard 500-L.

#### **Water Penetration**

AMCA defines the beginning point of water penetration as the free area velocity at the intersection of a simple linear regression of test data and the line of 0.01 ounces of water per square foot of free area and is measured through a 48" × 48" louver during a 15 minute period. The AMCA water penetration test provides a method for comparing louver models and designs as to their efficiency in resisting the penetration of rainfall under specific lab conditions. All-Lite recommends that intake louvers are selected with a reasonable margin of safety below the beginning point of water penetration in order to avoid unwanted penetration during severe storm conditions.

# Selection Criteria

Follow the steps listed below to calculate the louver size needed to satisfy the required air volume while minimizing the adverse effects of water penetration and pressure loss.

- 1. Determine the Free Area Velocity (FAV) at the maximum allowable pressure loss using the Pressure Loss chart to the left. While job conditions vary, typically, the maximum allowable pressure loss should not exceed 0.15 in.wg., and the FAV for 0.15 in.wg. pressure loss is listed on the front page of this sheet.
- 2. Intake Applications If the FAV at the Beginning Point of Water Penetration (shown below) is less than the FAV from step 1, then use the FAV at the Beginning Point of Water Penetration in step 3, otherwise use the FAV from step 1.

**Exhaust Applications** Use the FAV from step 1 in step 3.

3. Calculate the total louver square footage required using the following equation.

4. Using the Free Area chart above, select a louver width and height that yields a free area ft² greater than or equal to the required louver size calculated in step 3.

#### **Water Penetration**

Beginning Point of Water Penetration = 649 fpm
