The sand trap louver is made of aluminum section/GI sheet. It is composed of two sets of inverted U-channels, mounted vertically on two opposite rows.

The sand trap louver is used at the fresh air inlet. It can lower the dust loading of conventional filtration as it is designed to separate large size sand particles at low to medium speeds. It can be fitted with a bird/insect screen mesh.

The sand trap louver is a self-emptying system, it has a set of holes at the bottom of the casing to discharge the separated sand particles.

Tested by AMCA in accordance with ANSI/AMCA 500-L

| **EAL2G:** EXHAUST AIR LOUVER WITH 2 INCH DEPTH IN GI |

- **WITHOUT SCREEN/WIRE MESH**
- **IS:** WITH G.I. INSECT SCREEN
- **SSWM:** WITH STAINLESS STEEL WIRE MESH

**SIZE:** WIDTH X HEIGHT

**NOTE:** 2000 MM X 2000 MM IS MAXIMUM SINGLE SECTION SIZE
Beta Industrial LLC certifies that the EAL2 shown hereon is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program.

The AMCA Certified Ratings Seal applies to Air Performance and Water Penetration ratings.

The beginning point of water penetration is 264.4 fpm

Test Information

Tested in accordance with ANSI/AMCA 500-L, Figure 5.5 Test sample size is 1219mm x 1219mm (48 in. x 48 in.) (Out to Out). Air Performance data are based on exhaust performance.
The gravity air louver is a wall-mounted device. It is composed of a set of horizontally mounted blades; they are normally closed and are free to rotate about the horizontal axis. The blades & frame are manufactured from aluminum extruded profiles. Horizontally mounted blades are available with bushes. Free area ratio (approx.) = 0.82 for 100% open blades.

To calculate the air flow rate:

$$CFM = 0.82 \times A \times B \times \text{Face velocity (fpm)}$$

$$L/S = 0.82 \times A \times B \times \text{Face velocity (m/s)}$$

The exhaust air louver is composed of a set of blades made of 2MM aluminum extruded profile/GI sheet arranged in 45 degree in horizontal rows and inclined downward to protect against rain water.

The exhaust air louver is used in cooling, heating and air ventilation applications for intake & discharge.

Frame depth 100MM, spacing 87MM & blade angle 45.

The wall mounted exhaust air louver EAL-4 is a weather proof external cover for air inlet and discharge openings.

The wall mounted fresh air louver is a simple form of filter louver. It is composed of an exhaust louver with an aluminum filter fixed at the back. The fresh air louver is used to supply fresh clean air to the air handling units. The filter is made from washable aluminum 1" media and is fixed on the back of the grille. Insulating gasket can be fixed around the back of the frame to prevent infiltration between the frame and the wall.

Available types of finishing:

- Natural anodized aluminum finish.
- Powder coated to RAL codes.

Free area ratio (approx.) = 0.37
To calculate the air flow rate:

CFM = 0.37 × A (in") × B (in") × Face velocity (fpm)

L/S = 0.37 × A (mm) × B (mm) × Face velocity (m/s)

SIZE: WIDTH X HEIGHT

**NOTE: 2000 MM X 2000 MM IS MAXIMUM SINGLE SECTION SIZE**
The wall-mounted fresh air louver is composed of an exhaust air louver which is fixed to a frame that contains a filter by means of steel hinges.

The filter is made of washable aluminum media. It is contained in rear frame and is easily removable.

The fresh air louver can be opened like door to give flexibility to access the filter for either cleaning or changing.

The fresh air louver is used in cooling, heating and ventilation application. The existence of filter provides clean air to the system.

Free area ratio (approx.) = 0.37

To calculate the air flow rate:

```latex
\text{CFM} = 0.37 \times A \text{ (in\textsuperscript{2})} \times B \text{ (in\textsuperscript{2})} \times \text{Face velocity (fpm)}\bigg/ \text{144}
```

```latex
\text{L/S} = 0.37 \times A \text{ (mm)} \times B \text{ (mm)} \times \text{Face velocity (m/s)}\bigg/ \text{1000}
```

AF Aluminum Filters are used widely in HVAC & other applications to filter air from dust and dirt.

AF is made of Aluminum filter media and a frame made of Aluminum extruded profiles.

AF is easily washable for frequent long-life use.

AF has a reasonable initial pressure drop.
