MODEL EL-6 (6" Deep "J" Blade Fixed Louver)
SUGGESTED SPECIFICATION

Furnish and install louvers as hereinafter specified where shown on plans or as described in schedules. Louvers shall be "J" blade style with 45° stationary blades. Stationary blades shall be contained within a 60° frame. Louver components (heads, jambs, sills, blades, and Mullions) shall be factory assembled by the manufacturer. Louvers sizes too large for shipping shall be built up by the contractor from factory assembled louver sections to provide overall sizes required. Louver design shall incorporate structural supports required to withstand a wind load of 30 lbs per sq. ft. (equivalent of a 110 mph).

PERFORMANCE DATA

AMCA Standard 500-L provides a reasonable basis for testing and rating louvers. Testing to AMCA 500-L is performed under a certain set of laboratory conditions. This does not guarantee that other conditions will not occur in the actual environment where louvers must operate.

The louver system should be designed with a reasonable safety factor for louver performance. To ensure protection from water carryover, design with a performance level somewhat below maximum desired pressure drop and .01 oz./sq. ft. of water penetration.

Beginning point of WATER PENETRATION

is

834 fpm

free area velocity at .01 oz. of water penetration

United Enertech Corporation certifies that the EL-6 shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with the requirements of the AMCA Certified Ratings Program. The AMCA Certified Rating Seal applies to air performance and water penetration ratings.
