MODEL A2
Smoke Damper • Single Thickness Blade • Leakage Class II • 250°F or 350°F • Galvanized Steel

Standard Materials and Construction

FRAME: 5½” x ¾” x 16 GA, galvanized steel hat channel. Flat 16 GA, galvanized steel head and sill for maximum free area on dampers less than or equal to 13” high.

BLADES: 16 GA, galvanized steel, single thickness, parallel action.

AXLES: Plated solid steel stub.

BEARINGS: Oil impregnated bronze.

LINKAGE: Plated steel angle and crank plates with stainless steel pivots, in-jamb type or on-blade type.

STOPS: 18 GA, galvanized steel angles at head and sill.

BLADE SEALS: Silicone.

JAMB SEALS: Stainless steel.

SLEEVE: Minimum 20 GA, galvanized steel by 18” long (sizes greater than 84” wide or 84” high require minimum 18 GA.).

CAULKING: Hardcast irongrasp 601 or UL-listed equivalent

ACTUATOR: Electric or pneumatic. External left hand mounted as viewed from jackshaft side of damper.

FINISH: Mill.

Options

Exact size (no undercut)
Sleeves and transitions
Actuators - 120V, 24V, 230V or pneumatic
Right hand and/or internal actuator mounting locations (restrictions apply)
Dual Position Indication (IDPI) switches
Model SM-501 flow-rated smoke detector.
Model 2151 no-flow smoke detector (12” minimum damper height)
Momentary test switch
Remote test box
Copper tubing (for pneumatic actuators)
Transformers
Tab-lock retaining angles - 1 or 2 sets
Stainless steel bearings
Stainless steel axles
Security bars
Short-width (less than 8”) and/or short-height (less than 6”) transitions

Notes

1. Nominal deductions will be made to the opening size given.
2. Dampers greater than or equal to 12” in height with factory mounted SM-501 smoke detectors require a minimum 19” deep sleeve (10½” on the actuator side). Detectors will be mounted on the side of the damper opposite actuator.
3. Dampers less than 12” in height with factory mounted SM-501 smoke detectors require a minimum 20 deep sleeve (11½” on the actuator side). Detectors will be mounted on the bottom or top of damper.
4. Smoke detectors can be ordered for field mounting with standard 18” deep sleeve.
5. Dampers for horizontal installation can only be mounted in a fire barrier constructed of masonry/concrete materials.

Damper Sizes

* Dampers smaller than minimum frame size require a transitions. Reference SD-TRFS.
** For sizes smaller than 16”W x 8”H, airfoil blades will be supplied.

This smoke damper meets the construction and performance requirements of:

- Underwriters Laboratories Inc. Standard 555S
- National Fire Protection Association Standards 80 and 90A
- ICC’s International Building Code
- California State Fire Marshal Listing #3230-1328:106
- Underwriters Laboratories Inc. Approved for dual direction airflow and dynamic conditions.
- Underwriters Laboratories Inc. Classified for use in smoke control systems for Leakage Class II and 250°F or 350°F.
- Actuators must be controlled by a smoke detection system.
MODEL A2
Smoke Damper • Single Thickness Blade • Leakage Class II • 250°F or 350°F • Galvanized Steel

Operational Ratings
Maximum Differential Pressure: 4 in.wg
Maximum Face Velocity: 2000 fpm (3000 fpm for selected size/actuator combinations)

Leakage Ratings
UL Class I
10 cfm per sq.ft. maximum @ 1 in.wg
20 cfm per sq.ft. maximum @ 4 in.wg

Sound Ratings
The Noise Criterion data below was tested in accordance with ASTM E477.99 in the center octave band.

Pressure Drop Ratings
The pressure drop data shown below is based on laboratory conditions. The test setup does not take into account elbows or other duct fittings that are part of every actual duct system. The configuration of the actual duct system immediately upstream and downstream of the damper often contributes more pressure loss than the damper itself.

Tested in accordance with AMCA Standard 500D, Figure 5.3
Intake air converted to standard air density.
