EVE

Powered Aire's Elite Vestibule Exception, EVE, was developed to be used as an exception to vestibules. The unit has met all criteria per various codes and has been tested in accordance with the ANSI/AMCA 220 standard. The EVE merges aesthetics and performance into a fashionable, low-profile air curtain designed for front-entry applications. The EVE offers a stylish intake and a curved, contemporary silhouette. Available in brushed stainless steel, white powder coat or black powder coat, the EVE blends into a building’s architectural design and layout while effectively creating a barrier that separates indoor and outdoor environments.

OPTIONS

HEATING
Electric .................. pg 115

FILTER
½" Cleanable

FINISHES
• Stainless Steel (shown)
• Black
• White

AT A GLANCE

Single Incremental Widths
3' to 10'

Max Installation Height
12'

Heavy Duty Motors
½ HP

KEY DESIGN FEATURES
• Three finishes to choose from. Stainless Steel, Black or White.
• Heavy duty 1/5 HP motors. 1625 rpm each.
• Custom pattern curved intake.
• The motor/blower plate comes out of the unit as an entire piece and the electrical connections can be made on the top or sides of the unit for more versatility.
• May be used as an exception for vestibules.

RECOMMENDED CONTROLS
• ON / OFF switch
• Magnetic door switch for activation
• Time delay relay

**BOTTOM**

- Nozzle Opening: 2.20"
EVE & EVE-E | INSTALLATION

IMPORTANT

- NOTE: The air curtain should be mounted as close to the door header/opening as possible for maximum performance. For every one inch the bottom of the air curtain is mounted above the door header, the back side of the air curtain should be moved away from the wall 1/2 inch.
- Trained and experienced mechanic / electrician required.
- WARNING: Risk of electrical shock, can cause injury or death: Disconnect all remote electrical supplies before servicing.
- Units must be field wired in accordance with all applicable local, state, provincial and national codes, including wire size and materials.
- All hardware and brackets must be of sufficient strength to safely support air curtain.

A TOP MOUNT

Unit has four 3/8 - 16 threaded inserts for installing one end of threaded rods. The other ends of the threaded rods can be attached to the ceiling. Threaded rod should not extend more than 3/4 inch into air curtain.

B WALL MOUNT

Back side of air curtain has 4 mounting holes capable of accepting four 3/8 mounting bolts or lags, with washers (use these holes only for mounting). Mark and pre-drill mounting surface accurately. A long extension and ratchet will negate the need to remove the motor/blower plate when installing. Mounting bolts or lags of sufficient size and strength should be installed and tightened through the four slots in motor/blower plate.

If motor/blower plate has to be removed, the junction box inside the unit must be removed along with any electrical switches that may be in the way. Remove 7/16 whizlock nuts holding plate in place, and slide plate out, rotating top portion of plate so it comes out first. Remember when installing plate to put bottom of plate in first and push and rotate top in last.

C EXTENSION BRACKETS (WALL MOUNT)

Extension brackets bolt on to the back of the unit, utilizing the 4 original mounting holes, and allowing for external mounting of unit to wall. Brackets have elongated mounting slots that extend the mounting width by 2½ to 3½ inches.

D LP123 BRACKETS

Universal mounting slots are used to lag the bracket to the wall (bolts by others). 3/8" mounting bolts (supplied) are threaded into the holes located in all four corners of the back side of the air curtain, leaving 1/2" of the bolts exposed.
Application Spotlight

VESTIBULE EXCEPTION

Vestibule Exception? Make it an Elite Vestibule Exception!

New vestibule exception rules have literally opened the door for air curtains to be used in place of costly, space-consuming vestibules in many building applications.

In a new world caused by the corona-virus pandemic which has reduced timeframes and budgets for many construction jobs, it’s time to consider air curtains as a viable alternative to vestibules.

Meet Powered Aire’s new Elite Vestibule Exception (EVE), which was designed for use an alternative to vestibules but equally at home as an aesthetically pleasing addition to customer entrances in any retail setting.

Available in three finishes
