Low Profile, High Capacity, High Efficiency Evaporative Cooling
24,000 to 26,000 CFM Industry Standard Rating

Features

• “Low profile” (only 47.25” high)
• Factory tested and shipped ready to operate, including factory wired components
• ETL Listed and labeled in accordance with U.L. standards
• Copper-wound, heavy duty ball bearing motors
• One high capacity pump provides complete media saturation
• Self-aligning, heavy duty, greaseable, pillow block, ball type fan bearings
• Fan performance is factory set to job specific specifications
• Premium 8” thick cross fluted 80% efficient media
• Lifting sky hooks

• The most up-to-date propeller type axial fan affords maximum air delivery while minimizing horsepower
• Heavy gauge, Hybralume™ construction
• Epoxy powder base paint finish baked on at 375° on key components
• Rugged cabinet assembly with double thick Hybralume™ corners
• “Rain-Tight” pitched top construction (1/4”/12”)
• Easily accessible external distributor clean-outs
• Side access media removal
• Adjustable motor sheave for air flow adjustment
• Plastiliner™ coated reservoir

Available Options

• Class II, U.L. 900 media
• Prewired control packages
• Distribution flush system
• Freeze protection
• Hinged access door
• Self-tensioning belt
• Installation accessories
• Fused and non-fused disconnects

### Notes:

1. Performance rating include the effects of the evaporative media, inlet device (louver or grill), motor and drives in the airstream.
2. Performance certified is for installation Type B: Free Inlet, Ducted Outlet
3. Power rating (BHP) does not include transmission losses.
4. The 700 series fan type evaporative coolers are only designed for straight down ducted applications. External static pressure ranges of 0.0” to 0.2”. Higher ESP are only shown to demonstrate fan characteristics and performance with loaded media. For ducted applications with external static pressures exceeding 0.2” a UMP - 900 series blower model is recommended.
5. Only motors 1 HP or less are provided with integral thermal protection. Motors 1.5 HP or greater require a separate motor overload device. Amperage ratings shown are NEC at nominal HP. Usable at 208v. Consult factory for overload and control options.
6. Weights are in pounds and include motors, pumps and drives. Operating weights include saturated media and assumes 2.5” depth of water in sump. Weights exclude optional accessories such as curb, diffuser and controls.
7. Minimum duct sizing should equal discharge dimension. Evaporative cooling is an adiabatic process. Possibility of water damage may exist. Special consideration must be taken when utilizing an evaporative cooler. Consult factory for special applications.
8. 230v pumps are available; contact UMP for details.
9. Model of UMP-739-HL is available with either an inlet louver or inlet grill. An inlet louver is recommended to protect the evaporative media from outdoor elements such as UV exposure, birds & storm damage. An inlet grill may be used in applications where a greater air volume is required but may shorten media life.
### UMP-739-HL Optional Accessories

**CAUTION** - Guards must be installed when fan is delivering air over an occupied space, or when deemed advisable for safety. UMP diffusers feature a “safety guard” design. FAN-AIR coolers will not be provided without a diffuser or grille.
