

FRP FUME EXHAUSTERS

- Capacities to 84,000 CFM
- Static pressures to 25"WG
- Two wheel choices
- Temperatures to 250°F.

Fiberglass-reinforced-plastic fans for handling corrosive gas streams in a wide variety of process applications...

THE NEW YORK BLOWER COMPANY
7660 Quincy Street
Willowbrook, IL 60527-5530

FRP FUME EXHAUSTERS

Size 182
Arrangement 1
FRP Fume Exhauster,
counterclockwise, Bottom Angular Up,
with optional unitary base, inspection
port, outlet damper, inlet box.

BACKWARDLY INCLINED WHEELS

MEDIUM PRESSURE [MP] HIGH PRESSURE [HP]

FRP Fume Exhauster backwardly inclined wheels provide high efficiency and quiet operation with a non-overloading horsepower characteristic. Made of premium-quality, corrosion-resistant vinyl ester resin. Metal hub, shaft, and stainless-steel fasteners are encapsulated in full-thickness FRP.

DESIGN FEATURES

The New York Blower Company's FRP Fume Exhauster [FE] is designed so that all parts exposed to the airstream are constructed of high-quality corrosion-resistant fiberglass reinforced plastic. The FE is resistant to attack from most chemicals and is ideally suited to applications in the chemical, pulp and paper, wastewater-treatment, fertilizer, pharmaceutical, and metals industries.

- Eight sizes: 18", 24", 30", 36", 42", 48", 54" and 60" wheel diameters.
- Capacities to 84,000 CFM.
- Static pressures to 25"WG.
- Temperatures to 250°F.
- Choice of arrangements: Sizes 182 through 362 [medium-pressure fans only] available in Arrangement 10. Sizes 182 through 602 available in Arrangements 1, 8, 9, and 9-E. Sizes 362 through 602 also available in Arrangement 9-F.

AMCA SEAL

The New York Blower Company certifies that the FRP Fume Exhausters shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

CONSTRUCTION FEATURES

- Housing is made of premium-quality, corrosion-resistant polyester resin. By using male molds, housing interior surfaces are smooth, improving efficiency and reducing the potential for material build-up.
- Flanged outlet for easy in-duct connection.
- Slip inlet suitable for flexible-sleeve inlet connection.
- All Arrangement 10 fans, and all other arrangements up to Size 302, are rotatable to any of five discharge positions.
- Lifting eyes on all fans for ease of handling.
- Welded steel base is constructed of heavy-gauge components for structural strength and durability. Arrangement 10 base features self-contained motor platform.
- Neoprene gasketing at all bolted FRP joints.
- Fan exterior is coated with gray epoxy enamel.
- Close-fitting, Teflon® shaft-hole closure limits the free exchange of gases through the shaft-hole opening. [Teflon is a registered trademark of DuPont.]
- FE wheels are dynamically balanced before final assembly. After assembly, all fans are given a final trim balance check at the specified running speed.
- Meets ASTM D 4167 when fan is purchased with surface veil.

ACCESSORIES/MODIFICATIONS

- **Parallel-blade outlet damper**—for flow control. All airstream parts are constructed of FRP.
- **Flanged outlet drilling**—for ease of direct connection; dimensions shown on page 12.
- **Unitary base**—available with spring or rubber-in-shear [R-I-S] isolators. Isolation rails are available for Arrangement 10 fans without inlet boxes.
- **Flanged inlet**—plain or drilled [see page 12 for drilling pattern].
- **Drain**—threaded FRP drain with PVC plug, 1" npt, at lowest point of housing scroll.
- **Inspection port**—allows examination of fan interior. Located on drive-side half of housing at 2 or 10 o'clock, opposite discharge. Opening is 6" diameter on Sizes 182 and 242, 8" on Sizes 302 through 422, and 12" on Sizes 482 through 602.
- **Positive screw adjustment**—two threaded rods provide easy motor platform/V-belt adjustment. [Arrangement 10 fans only].
- **Arrangement 10 weather cover/belt guard**—provides motor and drive protection, and can be easily removed for inspection and maintenance. Louvered side panels provide ample motor ventilation.
- **Safety equipment**—belt guards and shaft and bearing guards are available for Arrangements 1, 9, 9-E, and 9-F fans, and coupling guards for Arrangement 8 fans.
- **Inlet box** [includes support leg]—for Sizes 182 through 542. Minimizes losses at inlet. See pages 4 and 13 for details.
- **Cleanout door**—provides access for cleaning and inspecting fan interior.
- **Shaft seal**—Viton® elements in FRP casing. Type 316 SST sleeve covers shaft for use with seal. Teflon seal and Hastelloy C-276 sleeve available.
[Viton is a registered trademark of DuPont Dow Elastomers.]
- **Surface veil**—for added protection against certain corrosives. Provides compliance to ASTM D 4167.
- **All-vinyl ester airstream**—provides additional protection from certain corrosives.
- **Graphite impregnation**—to control static electricity. The gas-stream surfaces are grounded to the fan base.
- **Narrow-width construction**—to optimize the point of operation. Available on all sizes to 75% of full width on medium pressure fans and 67% on high pressure fans. Maximum safe wheel speed increases as width decreases.

SAFETY EQUIPMENT

Safety accessories are available from nyb, but selection of the appropriate devices is the responsibility of the system-designer who is familiar with the particular installation, or application, and can provide for guards for all exposed moving parts as well as protection from access to high-velocity airstreams. Neither nyb nor its sales representatives is in a position to make such a determination. Users and/or installers should read "Recommended Safety Practices for Air Moving Devices" as published by the Air Movement and Control Association International, Arlington Heights, Illinois.

INLET BOXES

FOR FRP FUME EXHAUSTERS

Optimum fan performance requires straight airflow into the fan inlet. Due to space constraints, this is not always possible. Elbows are used to change airflow direction. However, when airflow is turned 90° at the fan inlet, there is a loss of fan performance due to eccentric loading of the fan wheel. **nyb**'s aerodynamically designed inlet box minimizes the entry loss and allows accurate prediction of the loss so it can be included in overall system calculation. See page 13 for dimensions.

STANDARD FEATURES

FRP inlet boxes are offered for Sizes 182 through 542 FRP Fume Exhausters. The inlet box is designed to attach to the inlet flange of the fan. A support leg with mounting plate is standard on all inlet boxes. When furnished complete with a unitary base or isolation base, the base must be extended to meet the support leg. The inlet box/support leg assembly is not intended to support additional weight from ductwork or any other system components.

The use of male molds and smooth resin-rich surfaces ensures efficient performance and excellent corrosion resistance.

The resin system is the same high-quality, corrosion-resistant system used in **nyb** FRP Fume Exhauster housings.

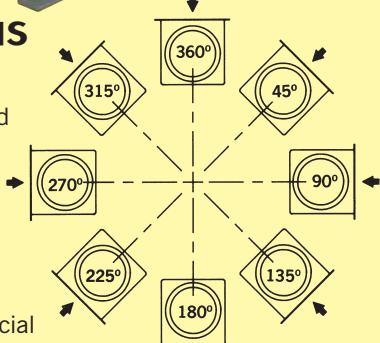

FRP inlet boxes are made in two sections, gasketed and bolted together with 316 stainless-steel hardware. Boxes can be fitted with drains.

An epoxy-based coating is applied to the exterior surface to be consistent with the finish on the exterior surface of the fan.

FRP inlet boxes are normally shipped separately for ease of handling.

INLET BOX POSITIONS

Position of inlet box is determined from drive side of fan.

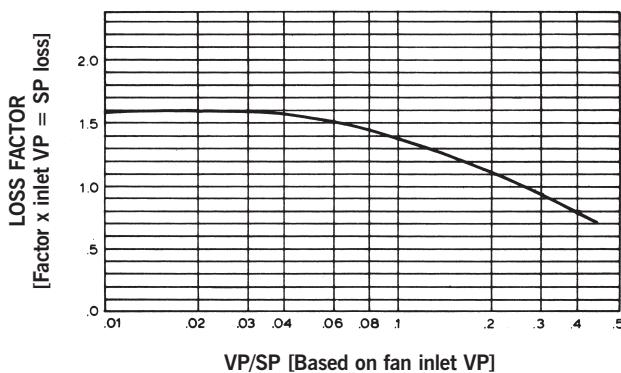

Inlet-box positions 135°, 180°, and 225° often require special construction to avoid interference with the fan support structure.

When other accessories such as unitary base are required, a special layout is necessary.

CORRECTION FACTORS FOR DETERMINING PERFORMANCE OF FRP FUME EXHAUSTERS WITH INLET BOXES

Fans equipped with inlet boxes require selection at a pressure that compensates for losses occurring as a result of the inlet-box configuration. The required steps for selection and an example are shown on the bottom of page 5.

CHART I

HOW TO USE PERFORMANCE TABLES

For a given fan size, CFM, and static pressure, performance tables can be used to obtain outlet velocity, wheel RPM, and BHP. If capacities are at conditions other than 70°F, sea level, or standard density [.075 lbs./cu.ft.], correction factors must be applied to static pressure and BHP.

STEPS TO FOLLOW	STEPS	EXAMPLE: Size 242 Medium Pressure Fan, Arrangement 1, to handle 9000 CFM at 8"WG at 200°F. at sea level.
Determine fan static pressure at standard conditions. If temperature or altitude is involved, correct for air density [see Charts II and III].	1	Chart II shows 1.25 correction factor for 200°F. 8"WG x 1.25 = 10"WG at 70°F.
Select size, RPM, and BHP of fan from capacity tables.	2	Capacity table shows 2204 RPM, 19.6 BHP for Size 242 MP fan at 9000 CFM at 10"WG at 70°F.
Check the maximum safe speed of the fan shown below in Chart IV.	3	Maximum safe speed of Size 242 medium-pressure fan, Arrangement 1, is 2700 RPM at 70°F.
Apply temperature maximum safe speed factors from Chart V to maximum safe speed of fan from Step 3 to determine new maximum safe speed when temperature is involved.	4	Chart V shows .94 correction factor for 200°F. .94 x 2700 RPM = 2538 RPM at 200°F.
Determine actual performance by dividing static pressure and BHP* from Step 2 by the correction factor in Step 1.	5	Actual performance: 9000 CFM at 8"WG at 2204 RPM at 15.8 BHP at 200°F.

*NOTE: Motor should be selected for BHP @ 70°F. to insure proper operation during "cold starts."

CHART II CORRECTION FACTORS FOR TEMPERATURE [°F.]		CHART III CORRECTION FACTORS FOR ALTITUDE [feet above sea level]		CHART IV MAXIMUM SAFE WHEEL SPEED AT 70°F. [RPM]			CHART V TEMPERATURE [°F.] SAFE SPEED FACTORS	
Temperature	Factor	Altitude	Factor	Size	All arrangements		Temperature	Factor
					MP	HP		
-50	.77	0	1.00	182	3710	4000	70–150	1.00
-25	.82	1000	1.04	242	2700	3300	200	.94
0	.87	2000	1.08	302	2155	2650	225	.86
20	.91	3000	1.12	362	1725	2100	250	.73
40	.94	4000	1.16	422	1475	1840	Note: 250°F. is maximum allowable temperature.	
70	1.00	5000	1.20	482	1250	1500		
100	1.06	6000	1.25	542	1045	1300		
130	1.11	7000	1.30	602	945	1170		
160	1.17	8000	1.35					
200	1.25	9000	1.40					
250	1.34	10000	1.45					

NOTE: If correction for both temperature and altitude is required, multiply factors from Chart II and III together: 3000 ft. and 200°F. 1.12 x 1.25 = 1.40 [combined factor].

HOW TO CALCULATE PRESSURE LOSS WHEN USING AN INLET BOX		
STEPS TO FOLLOW	STEPS	EXAMPLE: Required: Size 242 Medium Pressure Fan for 9000 CFM at 10"SP at 70°F.
Determine air velocity at fan inlet: CFM ÷ fan inlet area = air velocity (V)	1	9000 CFM ÷ 3.14 [fan inlet area, see page 13] = 2866 FPM.
Determine velocity pressure at fan inlet. VP = (V ÷ 4005) ² x (density ÷ .075)	2	(2866 ÷ 4005) ² = .51" VP
Determine VP/SP ratio at conditions.	3	.51 VP ÷ 10" SP = .05 VP/SP
Determine VP loss factor from Chart I [see page 4].	4	VP factor at .05 VP/SP = 1.55 [from Chart I]
Determine inlet-box loss by multiplying the VP factor from Step 4 times the velocity pressure from Step 2.	5	1.55 x .51" VP = .79" loss
Add the loss from Step 5 to the required system SP and select fan accordingly.	6	.79 + 10" = 10.79"SP. Select fan, motor, and drive for 9000 CFM at 10.79"SP at 70°F.

NOTE: The above procedure does not consider the slight change in efficiency. Actual operation will require slightly lower horsepower than that indicated.

QUICK-SELECTION CURVES

The following charts show comparative performance curves for full-width and 75% narrow-width Medium Pressure [MP], and full-width and 67% narrow-width High Pressure [HP] FRP Fume Exhausters. These curves represent the maximum static pressure and capacity available at each fan's maximum safe operating speed. The charts are intended to assist in initially selecting the proper fan size and design.

Narrow-width fans can generate higher static pressures through higher operating speeds. Maximum safe fan

speeds increase as the wheel width decreases [see maximum safe wheel speed chart for narrow-width wheels on page 11].

For specific operating points of full-width Medium Pressure and High Pressure FRP Fume Exhausters, refer to the performance tables on pages 6 through 9. For points of operation not shown in those tables, or for performance of narrow-width fans, refer to The New York Blower Company Electronic Catalog for further details.

Performance certified is for installation Type B: Free inlet, Ducted outlet. Power rating (BHP) does not include transmission losses.
Performance ratings do not include the effects of appurtenances (accessories).

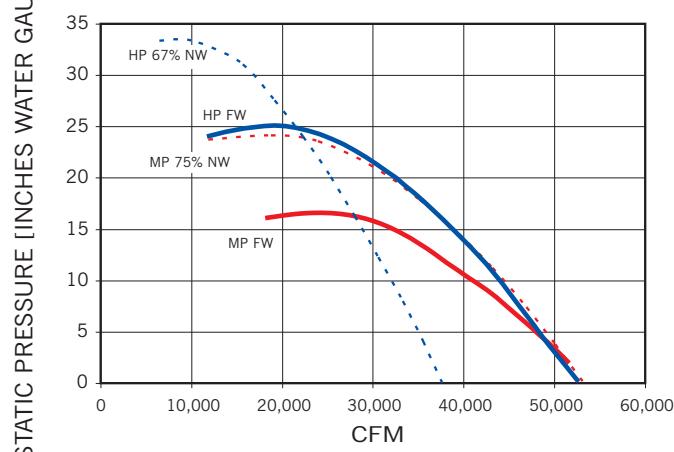

NARROW-WIDTH CONSTRUCTION

Narrow-width wheel construction is available on FRP Fume Exhausters to 75% of full-width on Medium Pressure Fans and to 67% of full-width on High Pressure Fans. Narrow-width construction permits "fine tuning" of fan performance, which is especially critical for Arrangement 8 fans.

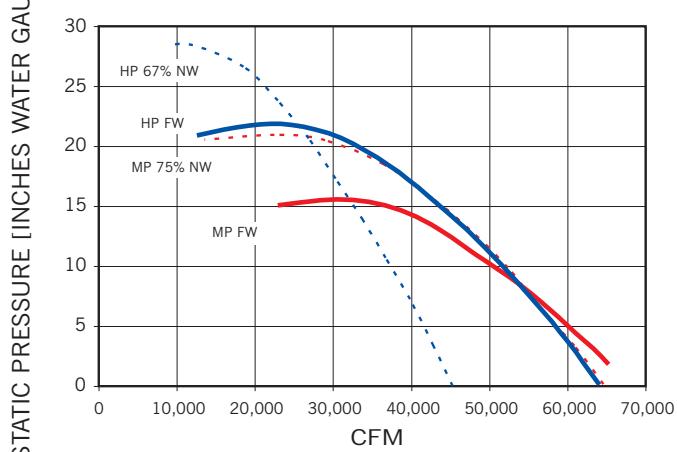

Using state-of-the-art design software, narrow-width construction now also enables higher static pressures through higher operating speeds. Chart VI shows the maximum safe speed for narrow-width wheels. The maximum safe speed of wheels increases as the width decreases. Contact your New York Blower representative or refer to your nyb Electronic Catalog for additional information.

*Add 3" for Bottom Horizontal or Bottom Angular Up discharges.

C-NW is maximum motor case length [NEMA C minus NEMA NW].

Tolerance: $\pm \frac{1}{8}$ "

INLET BOXES FOR FRP FUME EXHAUSTERS

Dimensions not to be used for construction unless certified.

1. Rectangular flange is furnished without holes as standard...available with holes on 4" centers straddling centerlines.
2. Round flange is furnished with holes to match drilling pattern of flanged inlet.
3. Base-bar dimensions match fan base-bar dimensions.

IN CORROSION-RESISTANT

FRP FANS...

STANDARDS MAKE A DIFFERENCE!

In FRP Fans, construction quality and accurate air ratings are vital. That's where standards make a big difference.

The American Society for Testing and Materials [ASTM] developed a standard specification for FRP fans and blowers. ASTM D 4167, Standard Specification for FIBER-REINFORCED PLASTIC FANS AND BLOWERS, defines minimum specifications for construction of major fan elements. It is a concise, understandable, readily available standard.

The Air Movement and Control Association's [AMCA] Certified Ratings Program provides assurance of accurate ratings. AMCA Standard 210 describes how fans are to be tested for air performance. The AMCA Certified Ratings Program requires the fan manufacturer to guarantee aerodynamic performance within close tolerances of the manufacturer's published ratings.

The Society of the Plastic Industry's [SPI] Users Guide to RP Industrial Equipment, #2-Fans, Guide for Purchasing or Specifying Reinforced Plastic Fans and Blowers, recommends specification of both the ASTM and AMCA standards.

The New York Blower Company's complete line of FRP Fans—Fume Exhausters, Radial Fume Exhausters, Pressure Blowers, General-Purpose Fume Exhausters—meet these standards.

FRP PRESSURE BLOWERS

5,000 CFM
36"WG

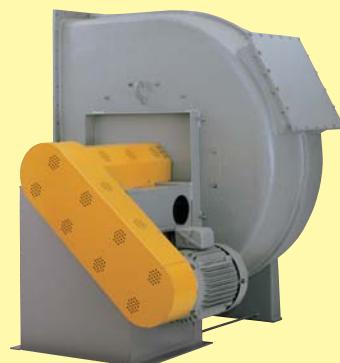

FRP RADIAL FUME EXHAUSTERS

7,500 CFM
14"WG

FRP FUME EXHAUSTERS

84,000 CFM
25"WG

FRP GENERAL-PURPOSE FUME EXHAUSTERS

73,000 CFM
17"WG

THE BEST FRP FANS STILL KEEP COMING FROM NEW YORK BLOWER!
