APPLICATION

Ruskin DFD60 is a 1½ hour rated multiple blade Dynamic (Fan On) fire damper. It is constructed with airfoil blades for high velocity applications and is rated for 2,000 fpm and 4" w.g. on all sizes and 4,000 fpm and 8" w.g. on select sizes. The DFD60 is also rated for dual direction air flow and can be installed vertically in walls or horizontally in masonry floors.

STANDARD CONSTRUCTION

FRAME
5" x 1" x 16 gage (127 x 25 x 1.52) galvanized, steel hat channel, structurally superior to 13 gage (2.3) channel frame.

BLADES
Single piece, airfoil-shaped construction with 14 gage (1.90) equivalent approximately 6" (152) on center.

BEARINGS
Stainless steel sleeve, pressed into frame.

LINKAGE
Concealed in frame.

AXLES
1/2" (13) plated steel hex or 300 series stainless steel.

FUSIBLE LINK
165°F (74°C) standard. 212°F (100°C) available.

DAMPER WEIGHT
Approximately 8 lbs. per sq. ft. without damper sleeve.

DAMPER SIZES

MINIMUM SIZE
Vertical or Horizontal Installation – 8"w x 6"h (203 x 152)

MAXIMUM SIZES
Single Section
Vertical Installation – 32"w x 48"h (813 x 1219)
Horizontal Installation – 30"w x 48"h (762 x 1219)

Multiple Section – 2000 fpm and 4" w.g.
Vertical Installation – 120"w x 48"h (3048 x 1219) or 64"w x 96"h (1625 x 2438)
Horizontal Installation – 120"w x 48"h (3048 x 1219) or 60"w x 96"h (1524 x 2438)

Multiple Section – 3000 fpm and 6" w.g.
Vertical Installation – 90"w x 64"h (2286 x 1626) or 120"w x 32"h (3048 x 813) or 60"w x 96"h (1524 x 2438)
Horizontal Installation – 60"w x 48"h (1524 x 1219) or 30"w x 96"h (762 x 2438)

Multiple Section – 4000 fpm and 8" w.g.
Vertical Installation – 64"w x 48"h (1625 x 1219) or 32"w x 96"h (813 x 2438)
Horizontal Installation – 60"w x 48"h (1524 x 1219) or 30"w x 96"h (762 x 2438)

OPTIONS

• FM Approvals as Specification Tested Product.
• SP100 Switch Package to remotely indicate damper blade position.
• FAST Angle for one side angle installations.
• PFMA Angles for two side angle installations.
• Sleeve of various lengths and gages to insure field compliance with UL installation requirements.
• Jamb Seals stainless steel flexible metal compression type.
• Blade Seals silicone blade edge seal.
• GA, Grille Access for one side installation and “out of wall” applications (see models IBD2GA or DIBD2GA)
• OW, Out of Wall of application where the damper can not be installed within the plane of the wall or floor.

NOTES

1. Dimensions in inches, parentheses ( ) indicate millimeters.
2. Damper/sleeve assembly furnished actual size.
Ruskin Company certifies that the DFD60 shown hereon is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA Certified Ratings Seal applies to air performance for the DFD60.

To determine the AMCA Licensed air performance:
Locate the applicable feet per minute face velocity on the bottom of the velocity vs. pressure drop chart below. Move up the chart to the most appropriate size damper line. From the intersection point, move left to determine the pressure drop on the left side of the chart.
DAMPER DIMENSIONAL DATA

FUSE LINK ADJUSTMENT

To Test or Replace the Fuse Link
1. Loosen the nuts on the J-bolt (Do not remove the nuts all together).
2. Remove the truarc ring.
3. Turn the jackshaft to open the damper and remove the fuse link.
4. Cycle the damper full open to full close positions, making sure the
damper operates freely.
   The damper should be able to spring closed in any position.
5. Replace the fuse link and adjust the damper into the original position.
Note: The damper can be adjusted in any position for volume control operation.

ITEM DESCRIPTION
1. Multiple Blade Fire Damper
2. Fusible Link Issue ‘E’
3. Fuse Link Linkage
4. J-Bolt
5. Truarc Ring 1/4” (6)
6. Over Center Linkage
7. Jackshaft Assembly

CAUTION
Damper assembly is under spring tension. Care should be taken to avoid bodily injury or damage to the
damper assembly.
Furnish and install at locations shown on plans or as described in schedules AMCA Certified fire dampers constructed and tested in accordance with UL Safety Standard 555 that meet or exceed the following specifications. Fire Dampers shall be produced in an ISO 9001 certified factory.

Damper frame, where size permits, shall be constructed using UniFrame Design Concept (UDC) and shall be a minimum of 16 gage (1.52) galvanized steel formed into a structural hat channel superior to 13 gage (2.3) channel frame. Top and bottom frame members on dampers less than 13” (330) high shall be low profile design to maximize the free area of these smaller dampers.

Damper blades shall be single piece airfoil shaped with 14 gage (1.90) equivalent thickness. Airfoil type blades generate low pressure drop and low noise levels. Bearings shall be stainless steel, permanently lubricated sleeve type turning in an extruded hole in the frame for maximum life.

Each fire damper shall have a 1 1/2 hour fire protection rating and shall be supplied with a 165°F (74°C) or 212°F (100°C) fusible link. Each fire damper shall be approved for vertical or horizontal mounting as required by the location shown and shall be installed using steel sleeves, angles and other materials and practice required to provide an installation in accordance with the damper manufacturer's installation instructions. Submittal information shall include the fire protection, maximum velocity and pressure ratings and the manufacturer's UL installation instructions. In addition, the fire dampers shall be AMCA licensed for air performance.

SUGGESTED SPECIFICATION

Furnish and install at locations shown on plans or as described in schedules AMCA Certified fire dampers constructed and tested in accordance with UL Safety Standard 555 that meet or exceed the following specifications. Fire Dampers shall be produced in an ISO 9001 certified factory.

Damper frame, where size permits, shall be constructed using UniFrame Design Concept (UDC) and shall be a minimum of 16 gage (1.52) galvanized steel formed into a structural hat channel superior to 13 gage (2.3) channel frame. Top and bottom frame members on dampers less than 13” (330) high shall be low profile design to maximize the free area of these smaller dampers. Damper blades shall be single piece airfoil shaped with 14 gage (1.90) equivalent thickness. Airfoil type blades generate low pressure drop and low noise levels. Bearings shall be stainless steel, permanently lubricated sleeve type turning in an extruded hole in the frame for maximum life.

Each fire damper shall have a 1 1/2 hour fire protection rating and shall be supplied with a 165°F (74°C) or 212°F (100°C) fusible link.
