

英国伦登风机（天津）有限公司特此证明，
此处所示 BCD 系列离心风机获得了加盖
AMCA 印章的授权。所示额定值系根据
AMCA出版物211和AMCA出版物311所进
行测试和程序确定，并符合AMCA认证额
定值计划的要求。

双吸离心风机

产品范围

该系列风机采用相同形状的外壳和方形出口，风机尺寸的大小符合于AMCA 99-0098-00 标准，并且所有尺寸均为R20的模数。本系列风机为双宽度、双吸后倾离心风机，风量由600 m³/h到250,000m³/h；全压最高达到3500Pa；全系列叶轮尺寸共18种，范围从 280mm到1000mm.

Production range

This fan range employs housings with square-shaped outlet and sizes from the R20 normal number series, in accordance to AMCA Standard 99-0098 00 and to DIN323.

The BCD range is made of high efficiency, double width, double inlet centrifugal BCD with backward inclined blades.

Volume flow rate from 600m³/h to 250,000m³/h

Total pressure up to 3500 Pa.

18 sizes from 280 up to 1000 mm wheel diameter.

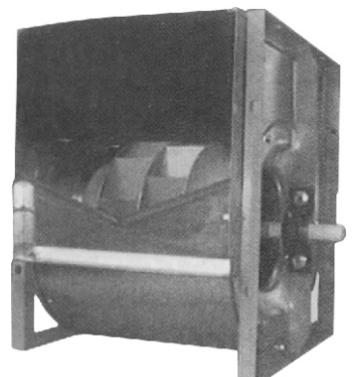

结构型式

BCD 风机包括以下尺寸型号：

Construction versions

BCD fans are available in the following versions:

BCD 系列 / BCD Series		
结构型式 Version	最小尺寸 (mm) From size	最大尺寸 (mm) To size
R	280	710
T	280	1000
T1	315	900
T2	500	1000

结构说明

伦登风机的结构无论采用哪种形式，都是基于强度和可靠性为最大原则，我们产品的共同特点是：

- 高质量
- 高性能
- 最佳的经济性
- 低噪声
- 安装方便

Construction Specifications

The construction standard used for London Fan BCD fans is inspired to the maximum strength and reliability, independently from the construction version. Common characteristics of these product are:

- product quality
- high performance
- outmost economy
- quietness
- ease of assembly

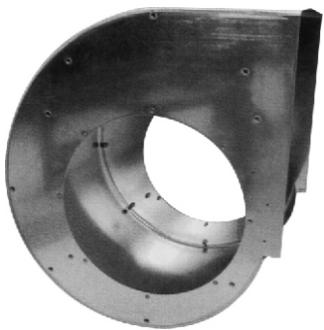

蜗壳

本系列风机外壳都采用优质镀锌钢板制成，蜗壳与侧板的联接，采用“Pittsburgh”卷边成型系统咬合而成，而非电气焊接，因此可以有效避免因各种焊接的焊点而产生的氧化。

Scrolls

All the scrolls are made with hot dip galvanised steel EN 10142 .No electrical spot welding is used as the scroll back is joined to the side plates with the Pittsburgh lock forming system . This prevents any oxidation starting from the welding spots.

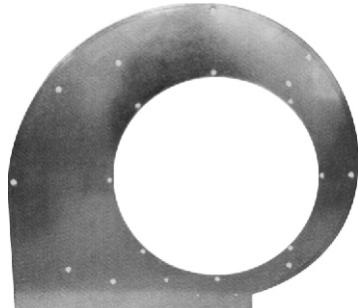

侧板标准孔

侧板上的标准孔是用来固定安装底脚或边框的，通过这些标准孔可以安装出不同结构形式的风机。对于叶轮直径小于或等于 40mm 的风机，这种联结采用自攻螺钉进行；对于叶轮直径大于 400mm 的风机，侧板设有 M10 的固定螺母来进行联结。

Attachment points on the side plates

Standard holes in the side plates are used to attach mounting feet or side frames create different versions Up to size 400, self-threading screws are used ,while all the larger sizes have captive nuts for use with M10 screws.

叶轮

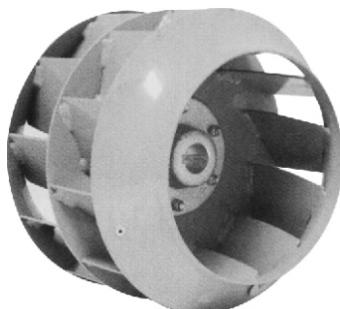

BCD 系列风机的每个叶轮都有11片特殊设计的后倾叶片，叶片采用低碳钢焊接后，经烤环氧树脂漆处理制成。

BCD 系列风机叶轮都依据 ISO 1940 标准进行动静平衡，平衡的精度达到 G4.0。

Impellers

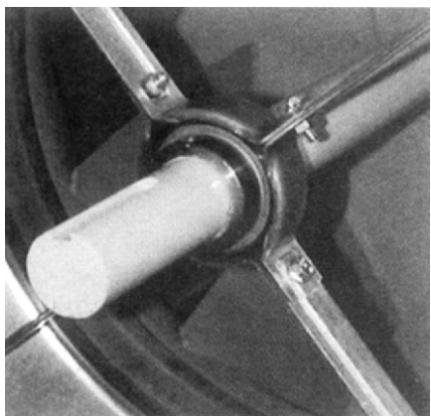

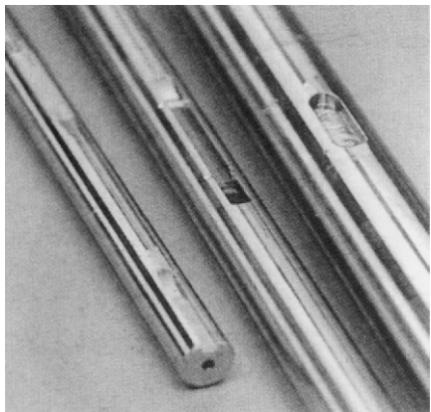

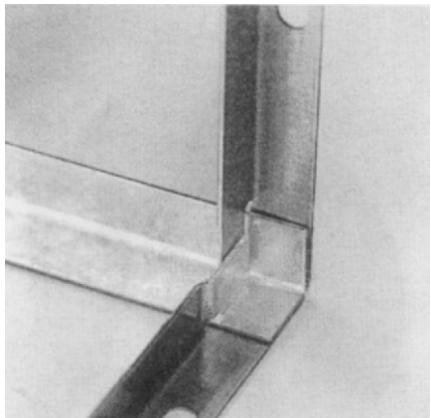

BCD impellers, starting from size 250 , have 11 specially-designed, backward inclined blades . Built from mild steel they are welded, treated and painted with alchidic–melamminic paint.

BCD impellers are statically and dynamically balanced according to ISO 1940 with grade G4.0.

边框

R 系列风机的轻型边框用符合 EN 10142 标准的镀锌钢板冷加工成型；而 T、T1、T2 系列风机的重型框架则采用热轧型钢焊接成型后烤环氧树脂制成，另外边框还可根据客户要求作表面热镀锌处理。

(图1)

Side frames

Light-construction side frames of the R versions are made with cold-formed use, galvanised steel. Heavy-duty side frames of the T, T1,T2, versions are made with hot-rolled steel sections,welded and coated with alchidic-melamminic paint. As an option, they can be protected with hot dip galvanising.

轴

轴采用 C45 碳钢棒料经精磨加工而成并利用精确机床加工键槽。轴在装到风机上以后，表面涂一层醒目、明亮的黄漆，以起到保护轴的作用。根据客户需求，伦登风机也可以提供不锈钢轴。轴径的设计所达到的安全系数，其值为极限转速大于或等于 1.25 倍最高运行转数。

Shafts

Manufactured from precision ground, C45 carbon steel bars, using precision tools to cut keyways.

All the shafts are coated, after assembly, with a clearly distinguishable, bright yellow protective paint.

Stainless steel shafts can be provided on request, with an appropriate reduction of the maximum operating speed

Shaft diameters are selected to achieve a safety factor for critical speed ≥ 1.25 higher than the maximum operating speed.

轴承

R 型风机选用的轴承均为自动调心气密性封闭的自润滑滚珠轴承，轴承为单排滚珠、深沟槽结构。轴承放在导电橡胶减振套内，并通过螺栓固定在轴承架上。（图1）

T 型风机选用的轴承均为自动调心气密性封闭的单排滚珠轴承，轴承安装在具有润滑孔的铸铁轴承座上，轴承座则固定在边框上。（图2）

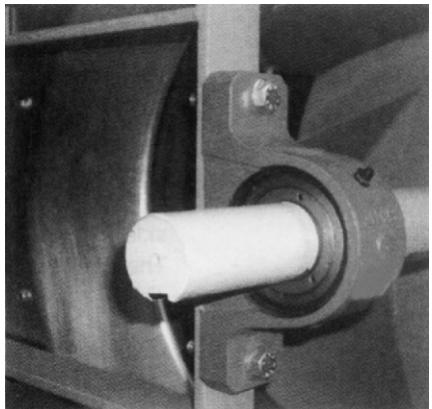

T1型风机使用加强单排气密性自动调心滚珠轴承，轴承用圆锥套锁紧在轴上，轴承安装在具有润滑孔的铸铁轴承座上，轴承座固定在边框上。（图3）

根据风机尺寸的不同，T2 型风机，采用不同型号的重负荷轴承；当叶轮直径为 500mm 时，采用单排滚珠轴承用圆锥套固定于铸铁轴承座中；当叶轮直径为 560, 630, 710 及 800mm 时，采用双排滚珠轴承用内分离圆锥套固定于轴承座中；当叶轮直径为 900mm 至 1000mm 时，采用双排圆柱滚子调心轴承固定在单个轴承座上。

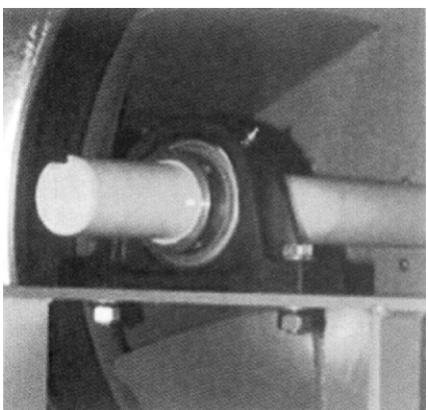

所有轴承座具有加润滑剂的孔，轴承座用螺栓固定在专门的加强边框上。（图4）

Bearings

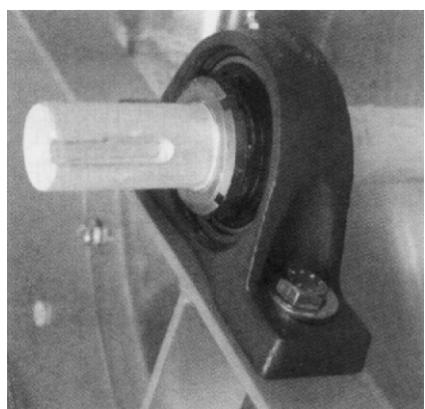

Fans of R versions use single row, deep groove,self-aligning ball bearings. Sealed and life lubricated, they are locked on the shaft with an eccentric ring clamp and supported, inside electrically conductive rubber shock absorbers, on inlet bolted spiders (Fig. 1).

(图2)

(图3)

(图4)

Fans of the T versions use sealed, single row, self-aligning ball bearings, with an eccentric clamp, mounted inside cast iron pillow blocks, with grease nipples, bolted to the side-frames (Fig. 2).

T1 version fans use reinforced single row sealed ball bearings, locked on the shaft with a conical sleeve and mounted inside cast-iron pillow blocks, with grease nipples, bolted to the side-frames (Fig. 3).

All the fans of the T2 version, have sealed heavy-duty bearings different types, according to the fan size: single row ball bearings with conical sleeve inside cast iron pillow blocks(500); double-row ball bearings with conical sleeve inside split block housing (560,630,710, and 800) or double row, self-aligning roller bearings inside piece pillow blocks (900 to 1000). All the pillow blocks have grease nipples for lubrication and are bolted to specially reinforced side-frames (Fig. 4).

在选配合理尺寸的皮带轮和在风机的最大负载条件下，轴承评价寿命L₁₀不小于40000小时（见皮带轮选配章节），在普通的运行条件下时，轴承的平均使用寿命会更高。由于可以广泛选择合理的轴承结构类型，因而更长时间轴承使用寿命的要求可以很容易的达到。

油脂的使用更换时间取决于轴承的使用条件，润滑脂的寿命与轴承L₁₀的寿命有所不同。

The bearings allow, with reasonable pulley diameters and at the maximum load conditions, to achieve an L₁₀ operating life of 40000 hours (see the chapter "Pulley selection"). With more common operating conditions, the average operating life can be much higher. Thanks to the wide choice of construction versions available, even longer design life requirements can be easily met.

As the operating life of the grease contained in the bearing depends on the operating conditions, it can be different from the L₁₀ operating life of the bearings themselves.

除了“轴承正确使用指南”章节之外，“使用与维修手册”章节也含有一些重要的内容：风机的正确安装、使用和维护，尤其是轴承的正确安装、使用和维护。

Apart from the chapter "Guidelines for correct use "the" Use and Maintenance Manual" contains important information covering proper installation, use and maintenance of the fan and particularly of its bearings.

油漆

根据客户的需求，伦登风机可以提供各种厚度的特制强力油漆涂层。

Paintings

Special powder-paint coatings of various thickness can be supplied on request.

防爆型风机

根据客户需求伦登风机可以提供用铝或铜制作进风口，或在进风口边缘镶嵌铜圈的防爆型风机。相关的选型或详情请与伦登风机联系。

Ignition protected versions

Ignition protected versions can be built on request, with inlet cones made of aluminium, copper or with copper rubbing stripes on the edge of the inlet cones. Please, contact the manufacturer for selection and details.

风机方向

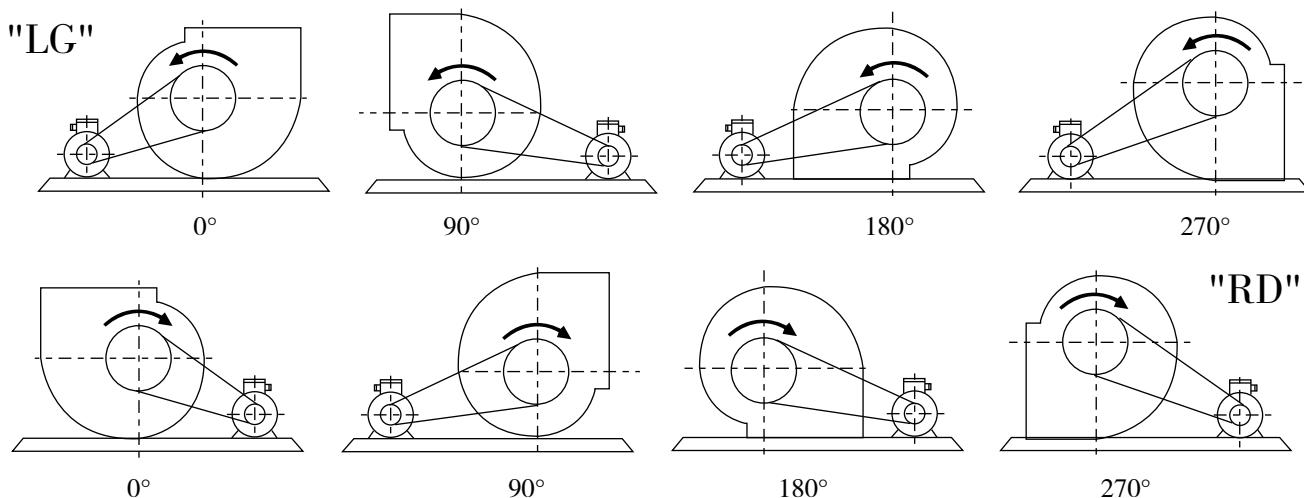

标准风机两端都能安装皮带轮，它们能各自独立使用，或是左旋，或是右旋。所有带边框型号的风机都能以 0° ， 90° ， 180° ，和 270° 四个方向的任一方向来安装。当订购标准风机时，不需要特别说明风机旋向，当订购带有附件的风机（例如排水塞），而附件位置需根据蜗板方向确定时，必须说明风机出口方向。

其他的附件可安装在由字母或数字标识的位置处。请查看每个附件的详细资料。如果客户对风机的旋向有特殊要求时，风机方向可根据 ISO 13349 国际标准和欧洲 Eurovent 1/1 标准来确定，即从驱动侧看，RD 代表右旋（叶轮顺时针旋转），LG 代表左旋（叶轮逆时针旋转）。下列图中表示了可实现的方向：

Fan orientation

Standard fans are supplied with both shaft ends prepared to fit a pulley .They can be indifferently used with either RD or LG rotation. All the versions with side frames can be easily turned to install them in one of the four orientations 0° ， 90° ， 180° ，and 270° . There is no need to specify fan orientation when ordering standard fans. Fan orientation must be specified instead when ordering fans fitted with accessories which must be located according to the scroll orientation, like drain plugs.

Other accessories may be installed in coded standard positions ,identified by letters or numbers. Please ,check the details concerning each particular accessory. When requested, fan orientation is identified, according to ISO 13349 and Eurovent 1/1, when looking at the fan from the drive side. RD means right (clockwise) rotation, while LG means left (counterclockwise) rotation. The achievable orientations are shown in the drawing below.

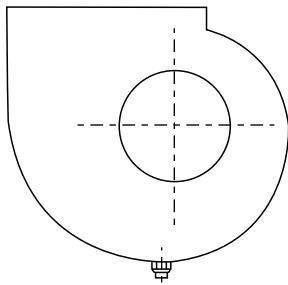

例如：

“BCD 500 T 0° +排水丝堵” = BCD 风机系列，尺寸500，“T”型， 0° 旋向角度且排水丝堵按图示安装。

Example:

BCD 500 T 0° +DRAIN PLUG” = BCD fan series, size 500 "T" version, with 0° orientation and drain plug installed as shown in the picture.

性能参数

空气性能

本样本所示的风机性能参数，是风机在“B”式安装条件下，对其进行性能测试获得的，“B”式安装即自由进风，接管道出风。

AMCA 210-07标准

UNI 10531 标准

ISO 5801 标准

所有参数都是在 1.2kg/m^3 空气密度的标准条件下定义的。风机的动压和出风口风速都按比例显示于每张曲线图的下方，这些参数是依据上述标准，使用出风口全面积计算的。

Performance specifications

Air performance

Air performance ratings of the fans described by this catalogue have been derived from performance tests made with installation type "B", with free inlet and ducted outlet.

AMCA 210-07

UNI 10531

ISO 5801

Ratings are referred to the standard air density of 1.20 kg/m^3 . Dynamic pressure and outlet air velocity, as shown on the scales below each diagram, are calculated in accordance with the said standard, using the total outlet area for calculations.

“自由出风”运行

当风机在“A”式安装条件下运行时（“A”式安装即指自由进风、自由出风）风机的有效静压 P_{SA} 比在接管道出风安装条件下的静压值低，其静压减少值通过对样本中的全压值减去动压的增加值得到符合要求的结果。动压的增加值为动压增加系数 K_d 乘正常动压值。 K_d 值如下：性能曲线的校正值 k_d 是不被AMCA国际认可的。

"Free-outlet" operation performance with correction factor K_d is not licensed by AMCA International
When operating in installation type "A", with free inlet and free outlet, the available static pressure of the fan, P_{SA} , is lower than when the fan is used with ducted outlet, and can be satisfactorily calculated subtracting, from the total pressure in the catalogue, an increased dynamic pressure, calculated by multiplying conventional dynamic pressure by a factor K_d shown below:

Performance with correction factor K_d is not licensed by AMCA international.

K _d -BCD
1.74

动压的增加是由于气体压缩造成的，而气体压缩是由于蜗舌和没有接风管而产生的，风管的作用相当于一个散流器，他能使增加的动压部分转换化静压。

This dynamic pressure increase represents the effect of the airflow contraction produced by the cut-off plate and the absence of an outlet duct, which would act as a diffuser, allowing at least partial conversion of the excess of dynamic pressure into static pressure.

使用指南

电机选择

驱动风机所需的小电机功率，是风机轴功率乘以一个系数，该系数包括皮带传动损失和合理的安全余量。安全余量包括在运行工作点或实际风机转速下产生的微小变化，它是由于电机的运行速度和传动比与原先的设计值有一些微小不同而引起的。

Guidelines for correct use

Motorselection

The minimum motor power, required to drive the fan, can be calculated multiplying this fan shaft power by a coefficient (function of the shaft power value) which includes both the belt drive power loss, and a reasonable safety margin. This safety margin covers any small change in the operating point or in the actual fan speed, which may be due to a motor speed or to a drive ratio slightly different from their design values:

$$W_{Mot} \geq W_{Tot} \cdot T_w$$

其中/where

W_{Tot} 风机轴功率
is the fan shaft power

T_w 电机选配系数
is the motor selection coefficient

对于 BCD 风机：

For BCD fans:

$T_w=1.25$ 当 $W_{Tot} < 0.75KW$ 时

if $W_{Tot} < 0.75KW$

$T_w=1.20$ 当 $0.75KW \leq W_{Tot} < 10KW$ 时

if $0.75KW \leq W_{Tot} < 10KW$

$T_w=1.15$ 当 $W_{Tot} \geq 10KW$ 时

if $W_{Tot} \geq 10KW$

• $1kw=1.36HP$

当电机功率大于7.5KW时，我们强烈推荐用户采用Y/△启动，或者其他方式软启动。

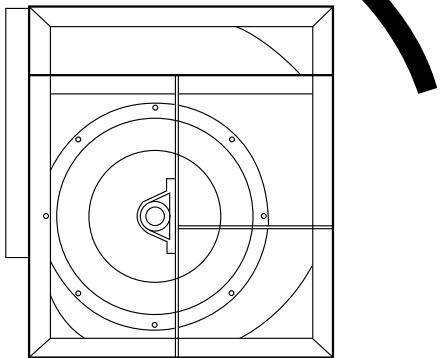

• With motors larger than 7.5KW the use of a star/delta (Y/△)starter or, alternatively, of a soft starter is highly recommended.

如果可以精确的得到实际运用工作点，并可以准确得到皮带的传动损失，则安全系数可以适当减小。

The safety coefficients may be reduced if the actual operating point is precisely known, and the belt drive loss can be accurately calculated.

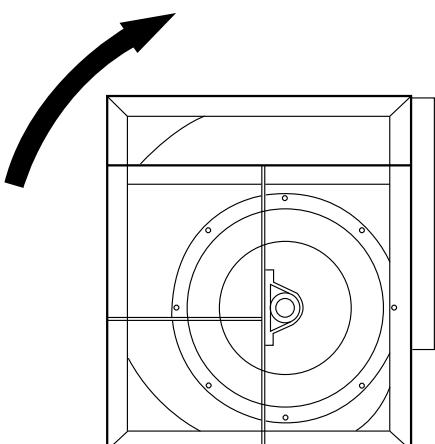

偏心夹紧轴承反转带来的影响

安装在R, T型风机上的轴承，设计和安装要求在一个固定的方向下运行，这个方向就是风机的正常旋转方向（如图所示）。如果风机意外反转，就应该认真检查轴承，以确保其依然牢固的锁在轴上。

Effects of backwards rotation on eccentric clamp bearings

Eccentric clamp bearings are used on fan versions R, T. They are designed and installed in such a way that they must be run only in the normal fan operating direction (see picture). If the fan has been subject to a short accidental backward rotation, the bearings should be carefully inspected, to verify that they are still firmly locked on the shaft.

皮带轮的选择

风机轴承使用寿命由多种因素决定，其中包括加到风机上实际负荷的大小和方向，而实际负荷的大小和方向与传递功率的皮带轮的槽数和直径有关。由于上述原因，为了达到理想的运行寿命等级L₁₀，甚至在最大负荷条件下也能达到理想的运行寿命等级，皮带轮的选配必须严格遵守下表所列的事项。

Pulley selection

The operating life of the bearings mounted on the fans depends on many factors, among which the entity and the direction of the applied load, which is a function of the diameter and of the number of grooves of the pulleys used to transmit the installed power. For this reason, in order to achieve even in the heaviest conditions, the expected operational life, L₁₀ it is necessary to respect the indications described in the following tables.

使用者必须记住：传动皮带的不正确安装或错误配置（皮带过紧、皮带轮不匹配等）都很容易引起风机故障。进一步的详细信息请参阅《使用与维护手册》。

The user should remember that an incorrect installation or a wrong configuration of the belt drive (high belt tension, misalignment of the pulleys etc.) can easily produce a fan malfunction. For further details, please refer to the "Use and Maintenance Manual".

R型

R型设置有螺栓固定的冷加工镀锌框架，并用螺栓将其固定在侧板上。它可增加风机结构的强度和刚度，并提供四个不同方位上的安装。这类风机适用于尺寸710以下。进一步详情请参阅“运转极限”附表。

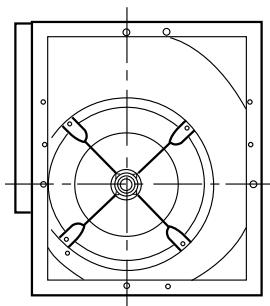

R version

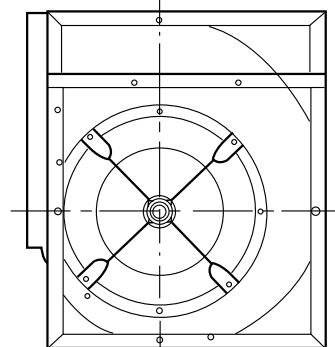

The R version is fitted with side frames made of cold-formed galvanized steel, bolted to the two side plates. They give better strength and rigidity to the fan structure and allow the mounting go through various positions. This version is available up to the size 710. For further information, please see the table "Operational Limits".

T型

该系列风机采用热轧型钢焊接并烤漆制成的加强侧框架，也可根据客户要求对框架表面进行热镀锌处理，加强侧框架采用螺栓固定在风机侧板上，使其更加坚固。该系列风机的尺寸大小为从280到1000。所有尺寸风机均配有带铸铁轴承座的轴承。进一步详情请参阅“运行极限”附表。

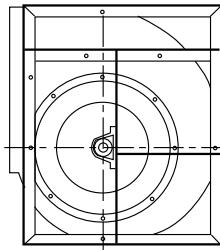

T version

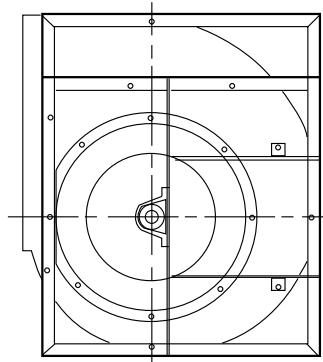

This version is stiffened through the application of reinforced side frames, bolted on the side plates and made with hot rolled steel sections, welded and coated with alchidic-melamminic paint. A safety option, the yellow protective d with hot-dip galvanising. This version is available in the sizes from 280 up to 1000. All the size are fitted with cast iron, pillow-block bearings. For further information, please see the table "Operational Limits".

T1型

这类风机尺寸大小为从315到1000。相对于前一种它的结构更加坚固紧凑，同时满足更高的性能参数要求，因为它采用了锥套锁紧轴承，这种轴承可承受更大的载荷，且具有更坚固的结构。进一步详情请参阅“运转极限”附表。

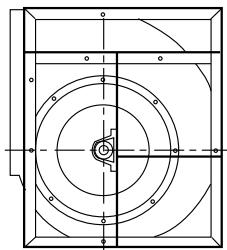

T1 version

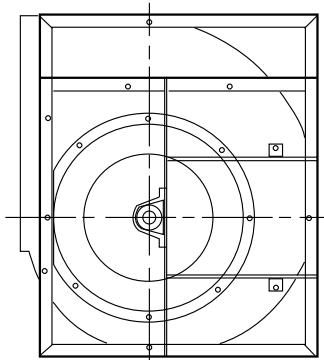

This version is available in the sizes from 315 up to 1000. The execution is structurally very similar to the previous one, but allows higher performance thanks to the use of bearings with conical sleeve, suitable for heavier duties and to some structural stiffening. For further information, please see the table "Operational Limits".

T2型

这类风机尺寸大小为从 500 到 1000。相对于前两种结构，它的结构更加紧凑，同时满足更高的性能参数要求，因为采用重负荷轴承，并采用相应的加强连接，比如轴、框架，这类风机可以达到更高的性能参数水平。进一步详情请参阅“运转极限”附表。

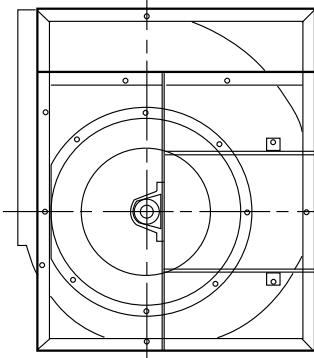

T2 version

This version is available only in the sizes from 500 up to 1000. Very similar to the two previous versions ,thanks to the use of heavy-duty bearings and of appropriately reinforced components, such as shafts and frames, this version achieves very high performance levels. For further information, please see the table "Operational Limits".

Performance certified is for installation type B - Free inlet, Ducted outlet. Power rating kW does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). The A-weighted sound ratings shown have been calculated per AMCA International Standard 301. Values shown are for Inlet LwiA sound power levels for Installation type B: free Inlet, ducted outlet.

经认证的性能是B类安装-自由入口，管道出口。功率额定值(kW)不包括传输(动)损失。各项性能额定值不包括附属物(附件)的影响。所示A加权声音性能额定值已按AMCA International 标准301计算。所示值为安装类型B -自由入口，管道出口的声功率级(入口LwiA)。

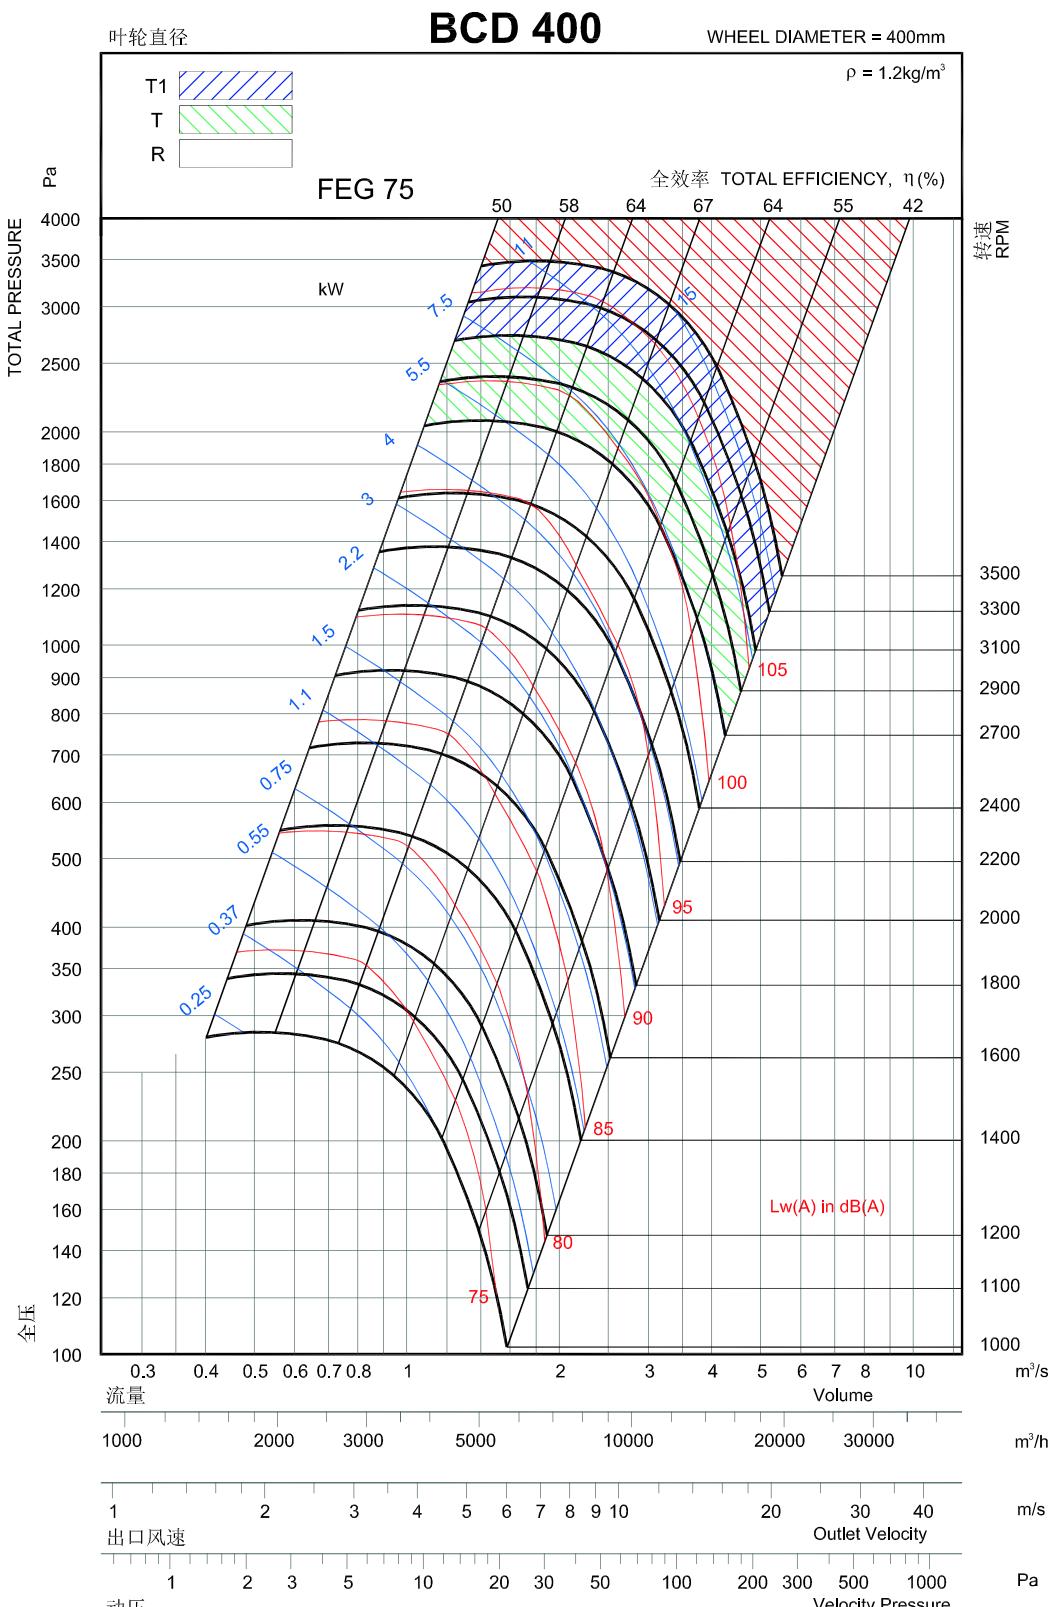

Performance certified is for installation type B - Free inlet, Ducted outlet. Power rating kW does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). The A-weighted sound ratings shown have been calculated per AMCA International Standard 301. Values shown are for Inlet L_{WA} sound power levels for Installation type B: free Inlet, ducted outlet.

经认证的性能是B类安装-自由入口，管道出口。功率额定值(kW)不包括传输(动)损失。各项性能额定值不包括附属物(附件)的影响。所示A加权声音性能额定值已按AMCA International 标准301计算。所示值为安装类型B -自由入口，管道出口的声功率级(入口L_{WA})。

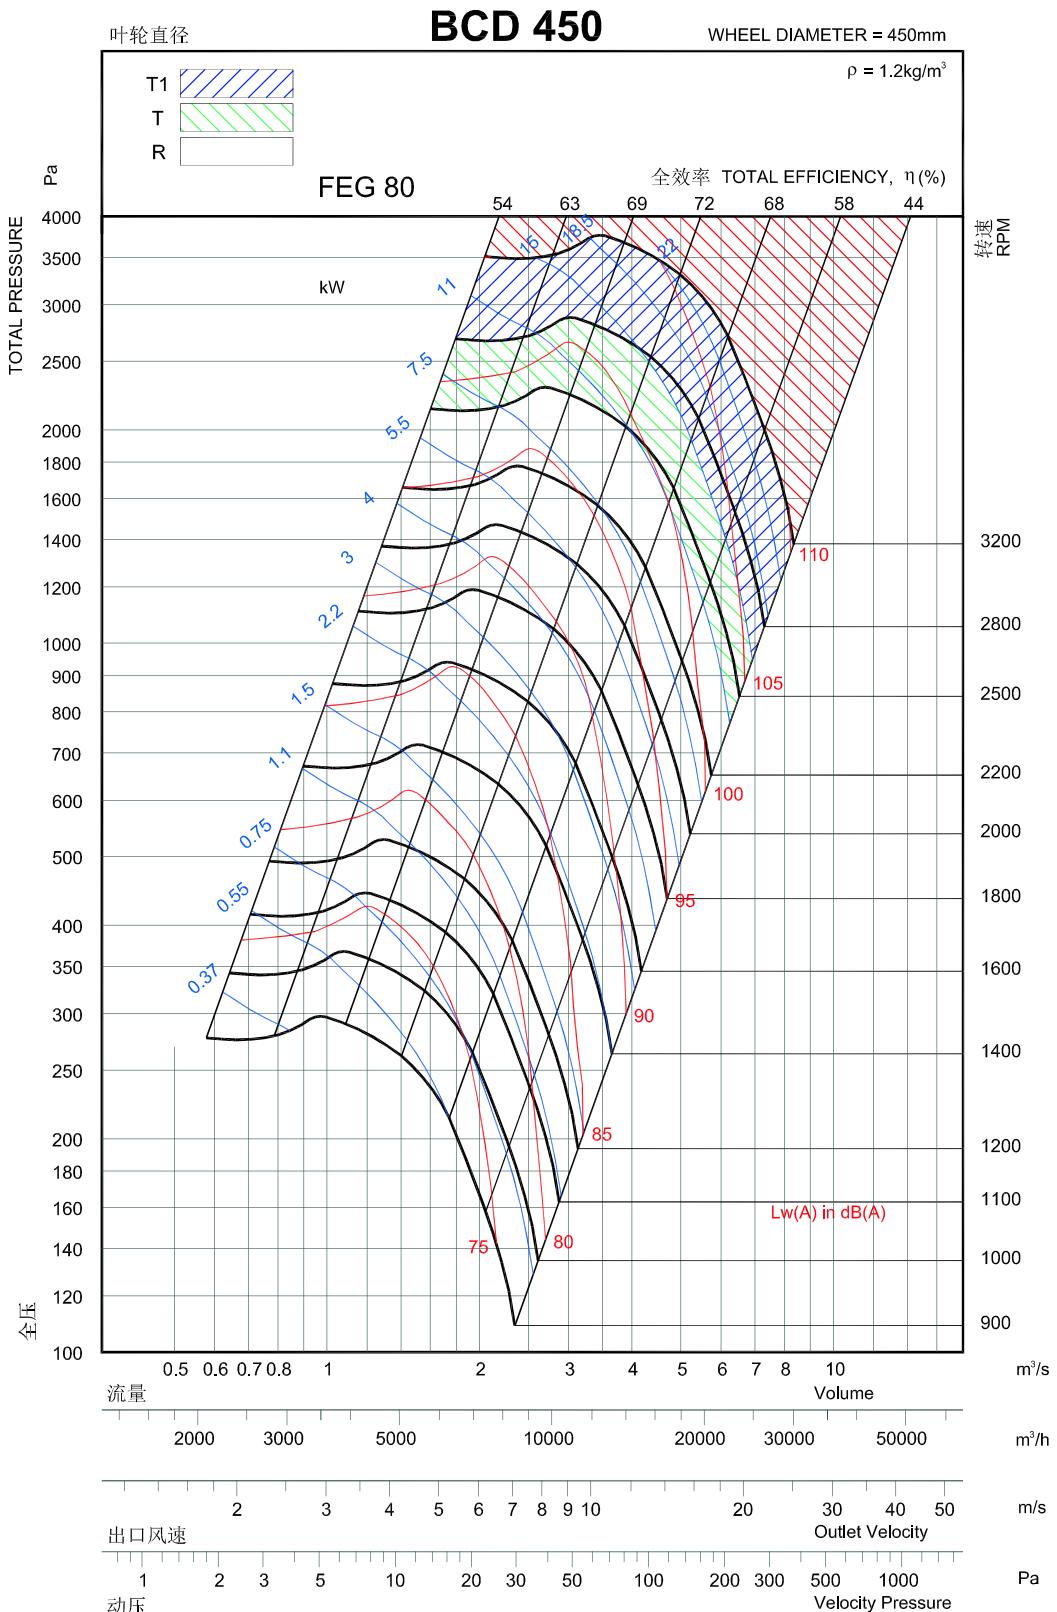

Performance certified is for installation type B - Free inlet, Ducted outlet. Power rating kW does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). The A-weighted sound ratings shown have been calculated per AMCA International Standard 301. Values shown are for inlet L_{wA} sound power levels for installation type B: free inlet, ducted outlet.
