ESD-202 is a weather louver designed to protect air intake and exhaust openings in building exterior walls. Design incorporates a drainable head member and stationary horizontal blades to channel water to the jambs which guides the water through vertical downspouts for escape at the sill. The ESD-202 is an extremely efficient louver with AMCA LICENSED PERFORMANCE DATA enabling designers to select and apply with confidence.

**Standard Construction**

**Frame**

Heavy gauge extruded 6063-T5 aluminum, 2 in. x 0.063 in. nominal wall thickness

**Blades**

Drainable design, heavy gauge extruded 6063-T5 aluminum, 0.063 in. nominal wall thickness, positioned at 45º angles on approximately 3 in. centers

**Construction**

Mechanically fastened

**Birdscreen**

3/4 in. x 0.051 in. flattened expanded aluminum in removable frame, inside mount (rear)

**Finish**

Mill

**Minimum Size**

6 in. W x 6 in. H

**Maximum Single Section Size**

120 in. W or 120 in. H (limited to 70 ft. sq.)

**Options** (*at additional cost*)

- A variety of bird and insect screens
- Blank off panel
- Clip angles
- Extended sill
- Filter rack
- Flanged frame
- Glazing adaptor
- Hinged frame
- Security bars
- Welded construction
- A variety of architectural finishes including:
  - Clear anodize
  - Integral color anodize
  - Baked enamel paint
  - Kynar paint

*Width and height dimensions furnished approximately ¼ inch under size.*
Free Area Chart (Sq. ft.)

Airflow Resistance (Standard Air - .075 lb/ft²)

- Test Size 48 in. x 48 in.
- Test Period 15 minutes

Water Penetration (Standard Air - .075 lb/ft²)

- Test size 48 in. x 48 in.
- Test duration of 15 min.

The AMCA Water Penetration Test provides a method for comparing various louver models and designs as to their efficiency in resisting the penetration of rainfall under specific laboratory test conditions. The beginning point of water penetration is defined as that velocity where the water penetration curve projects through .01 oz. of water (penetration) per sq. ft. of louver free area. **The beginning point of water penetration for Model ESD-202 is 1058 fpm free area velocity.** These performance ratings do not guarantee a louver to be weatherproof or stormproof and should be used in combination with other factors including good engineering judgement in selecting louver.
Maximum single section size for model ESD-202 is 120 in. W x 84 in. H or 84 in. W x 120 in. H (70 sq. ft). Larger openings require field assembly of multiple louver sections to make up the overall opening size. Individual louver sections are designed to withstand a 25 PSF wind load (please consult Greenheck if the louvers must withstand higher wind-loads). Structural reinforcing members may be required to adequately support and install multiple louver sections within a large opening. Structural reinforcing members along with any associated installation hardware is not provided by Greenheck unless indicated otherwise by Greenheck. Options and accessories including, but not limited to, screens, filter racks, louver doors, and blank off panels are not subject to structural analysis unless indicated otherwise by Greenheck. Additional information on louver installation may be found in AMCA Publication #501, Louver Application Manual.

Minimum Single Section Size
6 in. W x 6 in. H

Maximum Single Section Size
70 ft. sq.
Stationary Louver Drainable Blade
Extruded Aluminum

Options:
- Noncompressible dead load shim, sealant and backer rod not by Greenheck
- Optional bird or insect screen
- Optional extended sill
- Optional flange

Details:
- 1/2" x 1 1/2" x 1/8" (3.2 mm) extruded aluminum support angle
- Sealant as required not by Greenheck

Material:
- Extruded aluminum head
- Extruded aluminum blade
- Extruded aluminum sill
- Extruded aluminum jamb

Dimensions:
- 3.2 mm (0.063"), 1.6 mm (0.063"")
